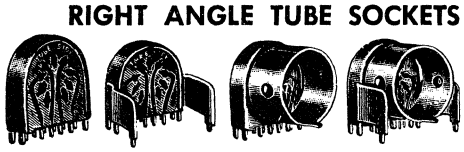
RIGHT ANGLE TUBE SOCKETS



Type A Type AX Type B Type BX

Ordering Example: RA7A = (Type 7 Pin Socket)

Available in 7-pin and 9-pin types in four styles, these sockets are designed to meet existing MIL Specifications. Active contacts are silver plated and non-fatiguing contact pressure provides proper insertion and withdrawal pressure with a minimum of contact resistance. Ideal for hand or mechanical insertion into printed-wiring boards using simple in-line punched round holes. Templates are furnished with each socket. Long terminals permit use of sockets on wide range of board thickness.

Type A — for general purpose applications.
Type AX — for special applications (military and commercial) where extra strength and rigidity are required.
Type B — same as Type A except tube shield shell added.
Type BX — same as Type AX except tube shield shell added.

RA 7 — 7 pin right angle tube socket. RA 9 — 9 pin right angle tube socket

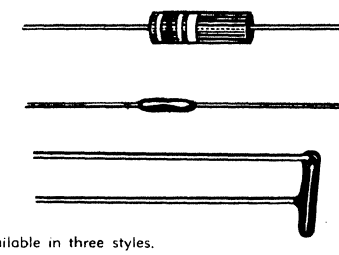
CERAFIL®

INDUSTRIAL CERAMIC CAPACITORS
ULTRAMINIATURE CAPACITORS
DIPPED-RADIAL & AXIAL LEADS
MOLDED-AXIAL LEADS



Cerafil® capacitors are the smallest ceramic capacitors available anywhere. These remarkably ultra-miniature units are designed primarily for air-borne and space-borne equipments, having critical space and weight parameters. They are also designed for transistorized circuit applications in hearing aids and other critical requirements where space and weight are at an absolute premium. The unique design and construction features of Cerafil® capacitors make it possible to obtain extremely high capacities per unit volume. These tiny capacitors are the ideal answer to many problems created by the growing trend towards miniaturization of electronic assemblies and equipments.

When tested using Cerafil® ratings, these units will meet or surpass the requirements of MIL-C-11015C.

All 29 stock values are available in three styles.

1. C80V dipped axial leads (Also referred to as C80A or C80T)
2. Dipped radial lead units (Also referred to as C80R)
3. Completely new molded MC80V

The new molded unit features a rugged epoxy encapsulation which provides an even greater degree of reliability to the already missile proven Cerafil®. Increased mechanical strength and the uniform dimensions make the molded Cerafil® ideal for automated assembly operation.

For full technical information request Bulletins NPJ-119 REV. and NPJ-120 REV.

INDUSTRIAL CERAMIC CAPACITORS (cont.)

CEROL® HIGH CAPACITY, HIGH RELIABILITY, ROLLED CERAMIC CAPACITORS

Cerol® capacitors are rolled ceramic capacitors in the high capacitance range of paper and plastic film dielectrics but in much smaller physical sizes and with superior electrical characteristics. Designed for general applications in bypass-coupling, filtering and blocking circuits. Excellent electrical characteristics for critical applications in decoupling and pulse circuits where low series resistance at high frequencies together with miniature sizes are required. Low series resistance makes them ideal for use in all computer circuits. Operating temperature range at rated voltage —55°C to 85°C and at 50% rated voltage —55°C to 125°C. Capacitance tolerance is ±20%. Will meet or surpass all the requirements of MIL-C-11015B.

Cerol capacitors are available in three types; type CR89, CR90 and CR91 rated at 50V, 100V and 200V respectively at 85°C and derated by 50% at 125°C.

Units are stamped with the rated voltage for identification of type.

Eyelet Feed-Thru Capacitors

Hi-Q Feed-Thru Capacitors Eyelet Type are the ultimate in miniaturization because of unique design. This design is such that the capacitors can be soldered directly to a chassis and provide excellent bypass performance where space is critical. The low inductance characteristics brought about through the construction of the capacitors make the eyelet type ideal for high frequency bypass.

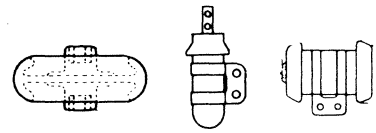
HP POWER & TRANSMITTING CERAMIC CAPACITORS

Exclusive with Aerovox these Power and Transmitting Capacitors are gaining increasing popularity as a replacement for higher priced Transmitting Mica Capacitors. Units may be operated to 105°C without derating and may be safely stored at temperatures of —80°C to +185°C. The dielectric used retains its properties at frequencies above 1000 megacycles to the degree that the inductance at the connections are major limitations in the determination of series resonance frequencies. The effective frequency limit in many cases depends on the method of mounting. Mainly used for By-Pass and Blocking applications these units are finding an increasing usage by manufacturers of transmitters and other allied equipment.



AEROCUP - POWER & TRANSMITTING TYPE AC0-AC8

Smaller version of the HPA - HPC etc. These Transmitting Ceramics find many applications due to standard mounting variations including Wire or Screw Terminals and Female inserts. Available in a wide range of capacities, tolerances, voltages and temperature coefficients. For full engineering details request Catalog from Aerovox Corporation, Distributor Division, or nearest authorized Aerovox Industrial Distributor.

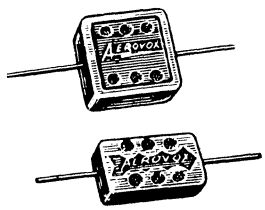
AEROVOX CAPACITORS

RECEIVING MICA CAPACITORS — (Continued)



Type 1469HV and 1464HV

Designed especially for television, low power transmitters and power amplifier applications, these capacitors feature the highest voltages ever before available in these case sizes. They are furnished in silvered mica molded in red Bakelite. Standard Tolerance is plus and minus 5% and they are tested to meet EIA standards. Units are marked with capacity and working voltage and are tested at double the rated voltage to insure long life.

DIPPED, SILVERED MICA CAPACITORS
TYPES ADM-15, ADM-19, ADM-20 and ADM-30

Aerovox plastic-coated dipped-mica units exceed many of the advantages of molded mica units, and at the same time are smaller than conventional units. Meeting all the applicable MIL-C-5B Test Standards for molded mica capacitors, these unique dipped-mica units offer the following features:

• High operating temperatures —55° to +125°C • Excellent long-life characteristics • Improved temperature coefficient range • Radial leads for automatic insertion and plug-in assemblies • Ideal for printed-wiring assemblies • Unsurpassed performance and stability characteristics • Smaller physical size.

Humidity Resistance: these capacitors shall have an insulation resistance of not less than 2,000 megohms after being subjected to the Humidity Resistance Test as outlined in MIL-C-5B. Minimum Insulation Resistance: 25,000 megohms at 25°C; 1000 meghoms at 125°C.

Capacitors will be marked with capacity and tolerance. In addition voltage rating wil be marked on all units other than 500 volts rating.

For full technical information request Bulletin NPJ-104.

CHARACTERISTICS

ADM-15—from 5 to 20 mmf. Characteristic "C". from 22 to 150 mmf. Characteristic "E". from 160 mmf. and up Characteristic "F"

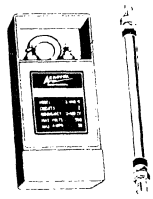
FILTERS

SCREEN ROOM FILTERS



Screen room filters comply with rigid specifications set up by the designers of the most advanced type screen rooms. All have attenuation equal to or exceeding that of the screen room. Easy mounting arrangements plus high attenuation assure you of the finest equipment specially designed for screen room use. These filters are hermetically sealed and terminals at both ends are shielded using knock-outs for ¾" and 1" conduit.

1¼" diameter mounting hole on all cases is countersunk to permit flush mounting of the filter on the screen room.

Crimped Leads

In addition to the straight lead design, DM capacitors are also available with crimped leads for printed circuit application. The crimp provides a positive stop when capacitors are mounted. This prevents interference of resin coat on the leads with dip-solder operation, provides greater mounting uniformity, and elevates the components slightly above the surface of the board. The crimp lead design is not a regularly stocked item, but it is available to special order at a small fixed handling charge.

Lead wire gage for crimped lead units is the same as for straight lead capacitors with the exception of DM15 and DM16. Crimped lead gage of DM15 and DM16 is #20.

Maximum Dimensions

The following is a tabulation of maximum dimensions of the various DM case sizes. They have been specified to anticipate variations in coat thickness and minor protrusions on the surface. As a result, average dimensions of a given lot may be appreciably smaller than those listed.

It is to be noted that the leads are not centered in the thickness dimension as can be seen on the end view dimensional drawing. Construction of Elmenco Dur-Mica capacitors provides for leads to project from one surface of the mica stack, causing them in turn to extend from one edge of the capacitor. Regardless of case size and overall thickness, leads will always be within 1/16 to 3/32 from one of the capacitor surfaces.

Not all dimensions of every capacitance value are listed below. It has been found that size varies almost linearly with capacitance value. As a result, dimensions of values between those specified below should be determined by interpolation.

All capacities marked with * are 300VDCW.
All capacities marked with ** are 100VDCW.

SCDM15 capacitors are units which have been given a single protective resin coat rather than the full series of dips to which standard units are subjected. There is a marked difference in size of these thin-coated capacitors, put there is a sacrifice in moisture resistance as a result. SCDM15 units are therefore recommended for applications requiring extreme miniaturization such as military and transistor filter, networks, and delay lines. However, for long term high reliability of operation, the capacitors should receive additional environmental protection such as encapsulation, circuit potting, or hermetic sealing.

HIGH-RELIABILITY DUR-MICA

Type HRDM

Missile, Computer, and other applications wherein entire system performance depends on reliable operation of thousands of components has prompted development of a High Reliability line of ELMENCO Dur-Mica dipped silvered mica capacitors. Selected DM units are subjected to a special "debugging" process to eliminate potential early failures. This process is particularly effective when the capacitors are to be subjected to operation near their maximum rated temperature. The HRDM capacitors are exposed to double rated voltage for 48 hours at 125°C.

HIGH VOLTAGE DUR-MICA

A new line of ELMENCO Silvered Hi-Voltage Dur-Mica capacitors is now available to complement the similar values in the molded configuration. These high voltage capacitors afford the same facility of use in low power applications by providing reliable operation in a small case size. Elmenco Dur-Mica capacitors may be substituted for similarly rated molded units normally supplied in the larger CM45, CM50, CM55, and CM60 case sizes.
The Dur-Mica design provides advantage of higher temperature operation (125° C. max.); radial leads for printed circuit application; higher capacitance in a given case size; and improved reliability. The dipped units, being solidly impregnated with corona resistant material, do not have the voids which make molded types susceptible to corona. As a result, the dipped capacitors can be supplied with voltage rating as high as 5000VDCW.
All Elmenco Dur-Mica capacitors are silvered mica construction. They conform to electrical and environmental specifications set forth in MIL-C-5 specifications.

HIGH TEMPERATURE MOLDED SILVERED MICA

The standard Elmenco molded mica capacitor is designed for use at a maximum of 85°C., the former industry and military standard prior to issuance of MIL-C-5B. Now, in some applications, these components are expected to operate without derating and with the same order of reliability at 150°C. The latter requirement is particularly difficult to cope with and obviously requires vast improvement over the standard design.

A specially designed Elmenco molded mica capacitor, designated Type HTCM, has been developed which will afford complete satisfaction at the higher levels of temperature stress. The resulting units have been carefully evaluated in millions of unit-hours of life and environmental testing to verify their performance excellence.

In order to retain proper characteristics at 150°C., the following steps are taken:

1. Every mica film is screened for high temperature characteristics. This is done 100%, not on a sampling basis.

2. A special high temperature molding resin is employed to preserve the strength and electrical characteristic of the mica at 150°C. This molding material was also selected for the lower molding pressure required. This reduced stress greatly enhances the reliability of the mica films.

3. A solid high temperature impregnant is used instead of wax for greater stability and retention of the moisture resistance characteristic. Wax will have a tendency to melt out at high temperature, causing possible change in capacitance value, loss of moisture seal, and possible fouling of adjacent circuitry. The HTCM capacitors will remain physically and electrically stable at 150°C.

With these design innovations, vast improvement is obtained in operating reliability at elevated temperature. The expected failure rate is reduced to a small fraction of what might otherwise be expected to standard design capacitors.

THESE HTCM CAPACITORS MEET MIL-C-5B TEMPERATURE RANGES "O" AND "P"

The Elmenco high temperature molded mica capacitor is designated simply by adding prefix letters "HT" to the standard part number. For example, a 100 mmf. ±5% CM15, standard part number CM15E101J, would be called an HTCM15E101J for high temperature operation.

The HTCM capacitors may be recognized by their gray-brown color as compared with the red molding resin of the standard 85°C. capacitors.

To conserve catalog space, part numbers for each individual HTCM capacitors are not listed as they are for the standard units. Capacitance values are shown for each case size with corresponding list price indicated for each tolerance. Voltage ratings are the same as for standard CM capacitors.

Demand for smaller units in higher voltages designed to meet the requirements for TELEVISION, POWER AMPLIFIERS, LOW POWER TRANSMITTERS, and various INDUSTRIAL USES has increased. EL-MENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of TELEVISION RECEIVERS.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. NO SPECIAL MOUNTINGS ARE NECESSARY; just wire right into the circuit.

The capacitors are molded in low-loss Phenolic Resin in CM-20, CM-35, CM-42 cases and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient capacitance drift, susceptibility to humidity, and length of life, according to RMA Standards. All units are wax-dipped for protection against salt water immersion.

ELMENCO CAPACITORS

TYPE MPD

DIPPED MYLAR*—PAPER (Elmenco type MPD)

The new Elmenco Type MPD (ARCO dp) capacitors are dip-coated tubular Mylar*-paper dielectric capacitors. They represent a double breakthrough in capacitor design by combining missile and computer quality with commercial radio-TV cost. The "dp" series is designed for near universal use from TV by-pass to critical industrial applications requiring stringent electrical and environmental characteristics. New high levels of ruggedness, stability, and reliability have been achieved, yet these new Elmenco capacitors are miniaturized for transistor circuitry.

Elmenco Type MPD capacitors are non-inductively wound and vacuum dipped to obtain solid impregnation and a rugged, moisture-proof coat. New fabricating techniques realize the full potential of the dielectric materials utilizing most of the low-cost procedures of the exclusive Elmenco dip-coat process. The result is a product of electrical excellence with high reliability in operation at 125°C. without derating. The specifications listed on this and following pages well-illustrate the inherent quality of these capacitors.

NOTE: The 100VDCW rated dp units are pure mylar* dielectric capacitors.

CERAMIC DISC

MINIATURE GENERAL PURPOSE

ARCO Type CCD ceramic disc capacitors have improved ceramic bodies which impart longer life and greater stability to any application. The standard CCD line has a ±10% tolerance and 1000VDCW rating, making possible a single ceramic disc stock for universal use. Whether a broad coupling or by-pass application, or a critical close tolerance use, ARCO CCD units fill the bill with dependability and economy. The 'space-saving' size of ARCO discs is another feature designed to offer greater service convenience with complete safety of operation. In addition to the 1000VDCW line, higher voltage ratings are available in Type CCD units. 3000VDCW (Type 3CCD) and 6000VDCW (Type 6CCD) disc ceramics are supplied in tolerance of ±20%.

TEMPERATURE STABLE

This new ARCO ceramic capacitor maintains excellent capacitance stability with wide temperature variation. The graph illustrates typical percentage variation of capacity value with temperature. The operating temperature range has been extended to −55°C. to +125°C. without derating of the 1000VDCW specification. Standard tolerance is ±10%. The combined small size, low cost, and high stability represents another significant advance in the quality line ARCO capacitors. All units are marked "TS" for identification.

TEMPERATURE COMPENSATING

TYPE CCTO

ARCO Type CCTO ceramic disc capacitors are zero temperature coefficient units specifically suited for high stability, high Q application. In addition to extreme temperature stability, Type CCTO capacitors have very high insulation resistance and low aging rate. These special characteristics are added to the high 1000VDCW rating and close tolerance of the entire ARCO ceramic line to provide a superior capacitor for the special purpose intended. Type CCTO capacitors are identified by "NPO" printed on each unit.

TYPE CCTN

Another member of the ARCO temperature compensating disc ceramic line is the Type CCTN unit which has a negative temperature coefficient of —750 ppm/°C. (N750). These units are used to counterbalance shifts in other circuit components with change in temperature. The result is a more stable circuit essential to many frequency control applications. Improved ceramic bodies in the temperature compensating line provide greater long term stability in addition to accurate temperature compensation. Type CCTN capacitors are identified by "N750" imprinted on each unit except the smallest size. On the small units the E.I.A. temperature coefficient designation "U2" is imprinted.

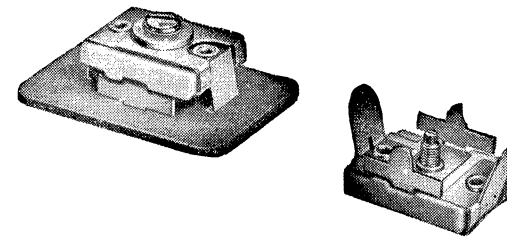
TYPE PC
PRINTED CIRCUIT TRIMMERS



The Elmenco trimmer capacitors, Types 40, 42, and 46, have been adapted for printed circuit techniques through alteration of terminals and mounting configuration. The holes in the terminal lugs are removed since necessity for hook-up is eliminated. The resulting solid terminals have greatly increased spring action, allowing the trimmer to be "snapped in" the printed circuit board and firmly held until soldered. The mounting lug portion of the trimmer has also been modified to facilitate positioning and support of the unit. Drawings of the trimmers and mounting lay-out are available upon request at no charge.

This printed circuit style is identified by the prefix letters "PC" preceding the regular part number. All listed values are available in the PC style.

For net price add $0.03 to the net price of the standard trimmer.

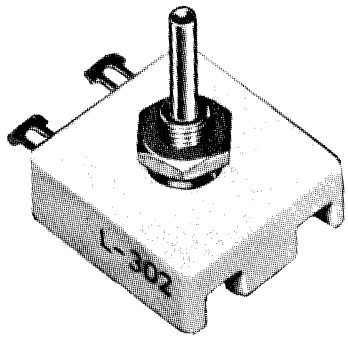
A complete Type 46 trimmer assembly with mounting bracket and adjusting shaft for ease of tuning. Can be supplied as pictured from stock or with construction variations to order.

To specify precede trimmer part number with the letter "S".

For example:

Type 460 trimmer will be ordered as S-460.



TYPE - L30

Net Price:
Add .06¢ to the Net price of padder alone

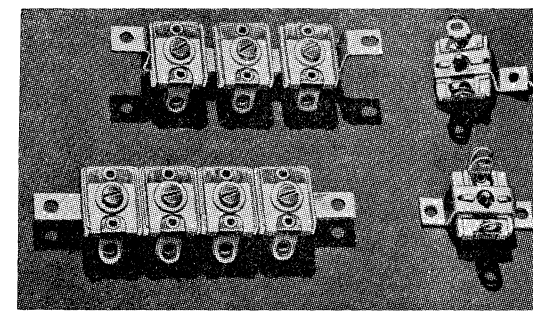
The Type 30 or Type 30M padder can now be obtained with a special adjusting screw which has been lengthened to accommodate a tuning knob. To obtain a padder with the special screw, precede the regular padder part number with the letter "L". For example, a 302 padder with the special screw would be specified as "L-302".

●

NOTE: Knobs may also be obtained if desired at a cost of 30¢ each net.

The two new assemblies shown at left have been developed due to increasing demands for miniaturized tuning devices. However, certain precautions must be taken in design so that these variable mica capacitors are not used in circuits for which they are not adapted. These assemblies are highly stable for components of their design, but they do not match the stability of the air dielectric tuners. Short term drift of the mica trimmers and padders after tuning is negligible. Long term drift at one setting due to changes in atmospheric conditions and physical motion should be well within ± 2%.

It should also be remembered that variable compression type mica capacitors do not have linear variation with adjustment. Rate of change of capacity decreases per turn as the screw is withdrawn. For example, a 306 padder will reduce to half the nominal maximum value within one opening turn. Those with a greater number of plates require further screw disengagement for a similar percentage reduction in capacity value. On the other hand, a 302 padder will reach one-half the nominal maximum in less than one-half turn open. Type 46 trimmers operate in much the same way. Detailed information on specific sizes is available upon request.



Mounting brackets as illustrated above can be supplied for all types of trimmers in flat "Z" (single mounting hole with or without non-rotational stop), and "U" (dual mounting hole) configurations.

PLASTIC FILM CAPACITORS

TYPES PT, PJ

Type PT capacitors are polystyrene dielectric enclosed in non-ferrous metallic tubes with compression glass end seals. The principle features of this type are high stability, high insulation resistance, low dielectric absorption, and low dissipation factor. Their principle uses include precision filter and tuned circuits, analog computer circuits, pulse networks, servo systems, reference capacitors, and high Q applications.

.01% max. at 25°C.
.02% max. at 85°C.

INSULATION RESISTANCE: 10^5 megohm-microfarads min. for 100VDCW and 200VDCW units; 10^6 megohm-microfarads for 400-VDCW and higher ratings (at 25°C.)

TEMPERATURE RANGE: —55°C. to +85°C.

TEMPERATURE COEFFICIENT: —120 ± 15 ppm/°C. This specification may be tightened if required for specific values.

DIELECTRIC ABSORPTION: .05% max. at 25°C.

STABILITY: ±0.1% maximum capacitance drift long term under maximum operating conditions.

TOLERANCES: standard tolerance ±5%. Also available, ±10% ±3% ±2% ±1% ±½ ±¼%.

Type PJ capacitors are polystyrene dielectric enclosed in silicone treated fused polystyrene jackets. The same superior quality of the Type PT hermetically sealed units is preserved in Type PJ units while effecting a marked saving in both size and price. Extensive evaluation has confirmed the excellent moisture resistance of this design as well as extreme ruggedness. The Type PJ will meet MIL tests for vibration, shock, moisture resistance and immersion as well as providing the excellent electrical characteristics specified.

ASTRON TYPE TES
SOLID ELECTROLYTE TANTALUM CAPACITORS

The Astron Type TES solid electrolyte tantalum capacitors are sub-miniature metal cased, hermetically sealed, containing only solid materials. The tantalum oxide dielectric endows these capacitors with long shelf life and flat characteristics even at extremes of rated temperatures.

ASTRON TES CAPACITORS ARE RUGGED, RELIABLE UNITS FOR USE IN THE FOLLOWING APPLICATIONS: TRANSISTORIZED EQUIPMENT, COMPUTERS, AIR CRAFT AND MISSILES, NETWORKS AND GENERAL POWER SUPPLIES, PORTABLE EQUIPMENT, AND HEARING AIDS.

TEMPERATURE RANGE:
−80°C to +125°C
With Voltage Derating

NOTES TO STANDARD RATINGS:

1. Standard ratings and tolerances are as shown on the table. Non-standard ratings and tolerances are available on request.
2. For insulating sleeve add M for Mylar* or R for rigid after the TES designation. Example (1) TESM-47-35 for 0.47 mfd 35 volt ±20% tolerance capacitor with Mylar* sleeve. (2) TESR-1M-35-10 for 1 mfd ±10% 35 volt capacitor with rigid sleeve.

Glass-to-Metal Sealed Tubulars

TEMPERATURE RANGE
−65°C to +125°C

For Commercial and Military Applications

- Amazingly small sizes, compact and light-weight units.
- Highly dependable operation at temperatures up to 125°C. without voltage derating.
- Exceptional capacitance stability over entire temperature range of −65°C to +125°C.
- High insulation resistance, low power factor, unusually low resonance loss. High test voltage indicates extra margin of safety in operation.
- Built to exceed stringent requirements of Specification MIL-C-25.
- Positive hermetic closure of the metal cases is assured by glass-to-metal solder seal terminals.
- Tubulars supplied in a variety of construction and mounting styles to meet your specific needs: extended foil or inserted tab; capacitor section grounded to case or insulated from case; plastic outer sleeve; with soldered-on tangential or L-type bracket; screw neck mounting style; or stud-base mounting style.

ASTRON CROSS-REFERENCE TABLE TO MIL-C-25

ASTRON TYPE	MIL TYPE	DESCRIPTION	
TQF	CP04	Uninsulated Body	**INSERTED TAB CONSTRUCTION** Capacitors with inserted tab construction are ideal for minimum size consideration. They are the smallest paper-foil capacitors available, the most compact units for operation over a wide temperature range to 125°C. without derating and can be used in AC as well as DC applications. Where smallest possible capacitor sizes are required, coupled with maximum capacitance stability and high insulation resistance over a wide temperature range, inserted tab construction is best suited for the application.
TQFP	CP05	Insulated Body	
AQF	CP08	Uninsulated Body	**EXTENDED FOIL CONSTRUCTION** Capacitors with extended foil construction are ideal where long life, excellent capacitance-temperature stability, high insulation resistance and small size, coupled with outstanding electrical characteristics over a wide temperature range, are required. They can be used in AC as well as DC applications. The extended foil non-inductive construction offers the lowest possible resonant losses in both low and high voltage applications.

ASTRON METALITE® HY-MET TYPE MVL

FEATURING 50 VDC RATINGS

PLASTIC CASED TUBULAR METALLIZED PAPER CAPACITORS

ASTRON Type MVL are axial lead, tubular type metallized paper capacitors contained in plastic tubes with an epoxy end fill to provide maximum moisture resistance. They are free of the usual wax coating and therefore are ideal for potting in plastic resins. The capacitor sections are impregnated in a solid thermosetting plastic which allows operation at temperatures up to 100°C.

Type MVL Capacitors replace ASTRON discontinued types ML and MLL Metallized Paper Tubulars.

ASTRON TYPE XPR

ROUND MINIATURE MYLAR* DIELECTRIC CAPACITORS

TEMPERATURE RANGE
−55°C to +125°C
With Voltage Derating

ASTRON Type XPR Tubular Capacitors use Mylar* Polyester film as a dielectric. Units are encased in a Mylar* Polyester tape wrap and ends sealed with a plastic thermosetting resin. This affords an excellent protection against moisture. Type XPR Capacitors are extremely small in size with high insulation resistance and exceptional capacitance stability.

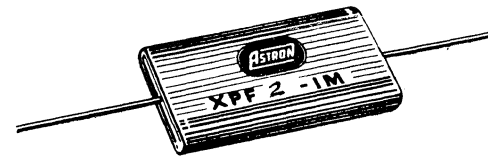
ASTRON TYPE XPF



FLAT MINIATURE MYLAR* DIELECTRIC CAPACITORS

TEMPERATURE RANGE
−55°C to +125°C
With Voltage Derating

ASTRON Type XPF Capacitors use Mylar* Polyester film as a dielectric. This series of non-metallic cased units employ an outer Mylar* Polyester tape wrap and ends sealed with a plastic thermosetting resin. This affords an excellent protection against moisture. Ideally suited for use in applications requiring minimum size, high insulation resistance and exceptional capacitance stability.

"Glassmike" Plasticon Capacitors

Type LSG

Type ASG

Type ASG are Plasticon A dielectric-silicone fluid impregnated capacitor elements in hermetically sealed glass tubes. Standard range −60°C to +85°C, extended range −60°C to +125°C with proper derating. The smallest and lightest high voltage capacitors made. Type ASG are ideal for DC and low frequency AC applications.

LSG type capacitors have Plasticon L film-silicone fluid impregnant. Designed to compete with mica capacitors, the LSG capacitors are more applicable for Radio Frequency. Special beneficial features include greater safety factor, lower RF loss, more conveniently mounted, utilizes less chassis space, impervious to moisture, and smaller in overall volume.

All 19/32 diameter Glassmikes are supplied with pigtail leads.

CORNING FIXED GLASS CAPACITORS

For coupling, decoupling, filtering, timing, switching or computer circuits, CORNING® Capacitors provide ultra-stable electrical performance. This stability is inherent in their fused glass and aluminum foil capacitive elements. These inorganic materials and continuous process and quality monitoring are responsible for the well known CORNING CYFR capacitor made for the Minuteman. Many of the basic advantages of the CYFR have found their way into the standard CYFM, TYO and LO-CAP units. The properties of these capacitors are entirely those of the closely controlled dielectric, and can't be changed by assembly methods or subsequent treatment. At 1 Kc and 25°C, dissipation factor is less than 0.001; at any given temperature, TC will not deviate from the curve by more than 5 ppm.

Corning manufactures highly stable fixed glass capacitors to meet your demanding circuit requirements. Their performance and economic advantages will add value to your equipment.

Tips for Added Value

CDE CORNELL-DUBILIER

STANDARD RATINGS

In selecting ratings of the "Preferred Replacement" capacitor line, Cornell-Dubilier has adhered to accepted industry standards whenever possible. This standardization does not limit the technician or result in field problems.

In the case of by-pass and coupling capacitors, ratings listed follow EIA standards for "Preferred Values." Standard decade values and associated tolerances are reproduced in the table at the right.

It will be noted from the table that ratings in frequent use prior to the adoption of the standard are not included. For example, .05 mfd. at ±10% tolerance is not a standard value—standards are .047 and .056. Considering the overlapping tolerance bands of these ratings, selection of the next higher or lower standard rating should give perfectly satisfactory service in the application.

The use of standard ratings results in benefits through lower prices and greater availability of stock through your CDE General Line Distributor.

PARENT CASE SIZES

CDE's careful selection of listed values to incorporate only "Parent Case Sizes" results in obtaining a higher quality unit without sacrifice of size or low cost. The "Parent Case Size" means that for a given capacitance rating, one or more voltage ratings have the same case size and price. In this case, the higher voltage unit is regarded as the "Parent Case Size."

In using the "Preferred Replacement" capacitor listings, always check the next higher voltage if the capacitance rating required is not listed at the specific voltage desired. For example, in the case of by-pass and coupling capacitors, if the rating is not listed under 200 volts, check the 400 and 600 volt listings. Selection of the higher voltage unit may be made in the knowledge that it has the same case size as the lower voltage unit and that no price penalty is being paid.

In addition, selection of the higher voltage unit provides an added measure of safety in the replacement through the higher dielectric strength.

In the case of electrolytic capacitors, listings are also based on "Parent Case Sizes." If the capacitance required is not listed at the voltage desired, always check the next higher voltages until the capacitance is listed. Use of the higher voltage unit again does not result in a price or size disadvantage. The higher voltage unit will perform better in the application since it will have a lower leakage current than the lower rated unit.

The use of "Parent Case Sizes" is another advantage offered by Cornell-Dubilier in its "Preferred Replacement" capacitor line.

WIDE APPLICATION RANGES

With the publication of this "REPLACEMENT COMPONENT SELECTOR," CDE introduces a completely new line of wide application range Twist-Prong electrolytic capacitors listed in Class 201.40 & 201.42. These wide application range Twist-Prongs provide a proper replacement for any electrolytic marked with a capacitance within the range on the wide application label and provided the voltage does not exceed the voltage on the wide application range label. The line is broad enough to cover replacement requirements but selective enough to be stocked **complete** by all CDE General Line Distributors—a proper replacement instantly available.

The wide application range Twist-Prong line takes into consideration the broad tolerances inherent in electrolytic manufacture and widely recognized throughout the industry. The standard tolerance table for electrolytics is shown at the right. By designing a completely new Twist-Prong line utilizing the latest materials and processes and recognizing the broad overlapping tolerance bands, CDE offers a Twist-Prong electrolytic line unsurpassed in quality or availability.

The type BRNP is a true non-polarized electrolytic suitable for use when no DC polarizing voltage is present. Processing and construction are essentially the same as that employed in AC motor starting capacitors to insure true non-polarized operation. Units are physically similar to the type BR—axial lead, hermetically sealed in aluminum cases with cardboard insulating sleeves. BRNP units are designed for use in cross-over networks and in boot-strap filtering applications.

MULTIPLE SECTION TUBULARS

BBRD, BBRT, BBRQ	201 • 26

These multiple section units feature construction similar to the type BBR. The aluminum case is cardboard insulated and equipped with combination vent and hermetic seal. Seven inch flexible leads are vinyl insulated. Mounting strap is standard. Maximum operating temperature is 85C; tolerance per EIA standards (see page 2). Dimensions are uninsulated; add 1/16" to diameter and 3/16" to length for over-all size.

PRINTED CIRCUIT WIDE-APPLICATION-RANGE TWIST-PRONGS™

Class	Type
201 • 40	APC, BPC, CPC, DPC

This line of wide-application range printed circuit Twist-Prong electrolytics is a completely new CDE product. Dimensions and mountings have been selected to fill the vast majority of replacement requirements. The rating selection also fits most replacement applications. Ratings are based on a wide application range. This recognizes the wide tolerances inherent in electrolytic manufacture and widely recognized as standard throughout the electronics industry (see page 2 for further details). The wide tolerances permitted by electrolytic applications make possible a wide application range unit.

CDE guarantees that the wide application range unit is a proper electrical replacement for any unit marked with a capacitance within that on the wide-range label provided the service voltage is within that on the wide-range label.

Recommended replacements for all Twist-Prongs in current applications are contained in the new 96 page CDE Twist-Prong Replacement Guide. Your CDE General Line Distributor will be happy to give you a copy.

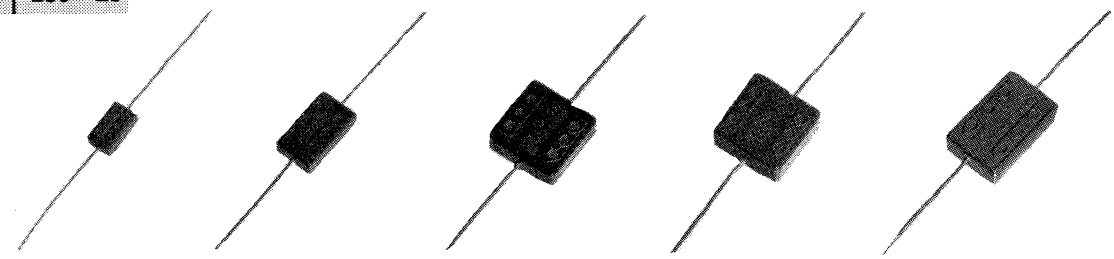
MOLDED MICA CAPACITORS



22R 5R 1R 1DR 3R

Five types of molded, silvered-mica dielectric capacitors provide a wide choice of ratings and form factors to fill replacement needs. Units are rated 500 VDCW and 1000 VDC test.

Operating temperature range is −55C to +85C. Tolerances of individual stock units are listed in the tabulation. The CDI molded unit makes an ideal mica capacitor replacement wher the small size and radial lead construction of the dipped uni is not required.

MEDIUM POWER PLASTIC CASED MICA

These medium power plastic cased mica capacitors are frequently used as replacements in airborne and portable electronic equipment because of their small size and weight and their relatively high RF power handling capabilities. Units are encapsulated in low loss plastic cases. Voltages and operating currents at various RF frequencies are given in the tabulation. Tolerance is ±5%. Current ratings are based on 30C ambient. For higher temperatures, use the following percentages of currents shown — to 50C, 95%; up to 60C, 85%; up to 70C, 70%. Maximum operating temperature is 70C.

MOLDED MYLAR* TUBULAR

Class	Type
204 • 13	PM

The type PM utilizes an all MYLAR* dielectric; has axial leads; and is molded in a low loss material which exhibits excellent moisture and humidity resistance. The case is wax-free and leakproof. Operating temperature range is —55C to 125C. Above 85C derate voltage by 10% at 100C and by 50% at 125C. Standard tolerance is ±10%. Listings are based on Parent Case Sizes and standard ratings (see page 2); check higher voltages if rating required is not shown at desired voltage.
*MYLAR is a DuPont™.

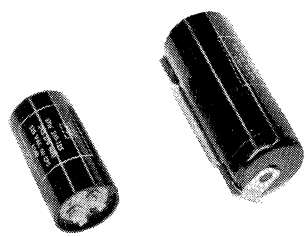
AC ELECTROLYTIC (MOTOR START) CAPACITORS



Although not designed for electronic applications, these units have been included at the request of many service technicians who also service major appliances and air conditioners. The type ETW is widely used in original equipment and as replacements in motor starting applications. The AC voltage rating is an intermittent rating based on a duty cycle not exceeding twenty 3 second periods per hour. Maximum operating temperature at the recommended duty cycle is 65C. Operation to 85C is permissible at reduced duty cycle or voltage. The ETW is a plastic cased unit with 3 way terminals. End caps and brackets are available as accessories.

Radio Interference Filters

CDE CORNELL-DUBILIER

VEHICULAR FILTERS

Class 220 • 00

The most frequent Radio Interference problem encountered by the service technician is the improvement in signal to noise ratio in mobile applications of Citizen's Band, commercial, and amateur high frequency communications equipment. The vehicular filters listed will solve the problems encountered provided good grounding and bonding practices are followed and use made of suppressors.

The prime source of noise from a gasoline engine is ignition noise from the high tension spark system. Use of special ignition wire, spark plug and distributor suppressors, resistor plugs, or combinations of these as recommended by the engine manufacturer will reduce this noise to reasonable value. After this step, other noises will probably be apparent.

A frequently overlooked source of a sharp "popping" noise is the low tension side of the ignition coil. After bonding the coil bracket to the engine, a CDE coaxial feedthrough capacitor should be installed in the lead between the battery and coil. The capacitor bracket should be bonded to the coil bracket. The feedthrough will completely isolate the coil from its wire as far as noise is concerned. The generator is probably the second most frequent cause of noise — in this case a grinding whine. To reduce this noise, a CDE coaxial feedthrough capacitor should replace the normal capacitor in the lead to the armature terminal on the voltage regulator. In addition, the noise can be reduced by shielding the lead to the regulator field terminal. In many cases, there may be buzzing caused by the action of the regulator. This may be reduced by enclosing the regulator in a metal case, bringing the shielded lead through with coaxial fittings and installing two feedthrough capacitors on the low voltage leads from the regulator.

Other popping or clicking noises from various accessories can be reduced by installing CDE by-pass capacitors directly on the offending devices.

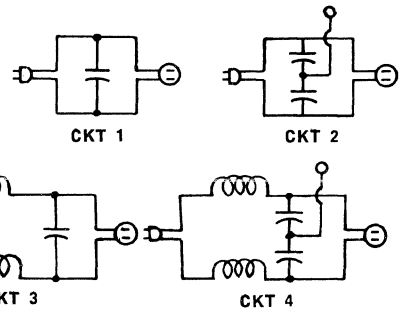
Radio Interference Filters

Class 220 • 00



RESIDENTIAL RADIO INTERFERENCE FILTERS

These QUIETONE® Radio Interference filters are designed for residential and light commercial applications on appliances and office machines. Noise from small portable electrical appliances can usually be reduced through use of a circuit 1 filter such as the IF-20, IF-4, or IF-5. The circuit 2 filter, IF-6, will provide slightly more reduction. The IF-21, circuit 3, will provide additional attenuation. The greatest attenuation will be achieved through the use of circuit 4 filters — IF-18 and 19.

F-C-I HIGH VOLTAGE CAPACITORS

F-C-I Type D6 high voltage capacitors are designed to assure reliable operation where space is at a premium. These capacitors utilize a combination of polyester film and high quality capacitor tissue. The impregnation in a highly purified mineral oil provides for extremely high insulation resistance and low power factor. The hermetic housing, which may be steatite or pyrex glass, allows for operation under extreme humidity.

All capacitors are constructed with extended foil windings, and all internal wiring is kept to a minimum. This eliminates most of the series inductance and produces a very high ringing frequency, an extremely desirable condition for energy storage and pulsing capacitors. D6 for 85°C; D6H for 125°C operation.

ADJUSTABLE, SEALED POLYSTYRENE CAPACITORS

F-C-I adjustable capacitors are designed for use in ultra-precise circuits where a large capacitance of an extremely close tolerance is required, and yet cannot be predicted in advance due to second order effects in the circuitry. In order to attain the exact value of capacitance needed in such circuits, F-C-I has designed a series of polystyrene capacitors whose capacitance value may be adjusted over a range of plus or minus 1½% of nominal value. (Plus or minus 2% for values of 0.1 Mf or lower can be attained.) The windings are completely non-inductive, thus minimizing power factor and soakage.

TYPE KM-7
HIGH VOLTAGE BAKELITE CASED CAPACITORS

F-C-I Type KM-7 capacitors are designed for high voltage applications where space is at a premium. Capacitors are housed in cylindrical electrical grade Bakelite cases and are filled with a purified mineral oil. The dielectric employed is a combination of polyester film and the finest grade capacitor tissue. Easy mounting is accomplished with the ¼-20 x ⅞ bolts. Corona is held to minimum because of the elimination of all metal. These capacitors are ideal for use in high voltage power supplies, test equipment, X-Ray equipment, energy storage, etc. Suitable for operation up to 85° C.

All capacitors are constructed with extended foil windings, and all internal wiring is kept to a minimum. This eliminates most of the series inductance and produces a very high ringing frequency, an extremely desirable condition for energy storage and pulsing capacitors.

HIGH VOLTAGE
TYPE KM-2 CAPACITORS—85 C OPERATION
WITH SOLDER-SEAL CERAMIC BUSHINGS

F-C-I type KM-2 capacitors have been designed specifically to meet the need for smaller, more reliable capacitors that will withstand the severe operating conditions encountered in military and industrial electronic equipment. The dielectric employed is a combination of synthetic Polyester film and the finest grade capacitor tissue. Capacitor cases are of CP70 rectangular construction. Units will meet the requirements of proposed specification MIL-C-19978. Terminals are of the solder seal ceramic type with screw bolt terminations for easy connections and true hermetic sealing. Capacity tolerance is plus or minus 10% with an insulation resistance of 20,000 megohm microfarads. Specify type KMH-2 for operating temperatures up to 125°C. Case sizes for the KMH-2 and engineering data for both series are available upon request. CP07 mounting brackets are available for all sizes.

SERVICE-DESIGNED CAPACITORS

HOW TO SELECT THE RIGHT REPLACEMENT

It is easy to select the right G-E replacement for any aluminum electrolytic capacitor used in the past ten years.

IF YOU KNOW RATING ONLY: Refer to correct type of capacitor and locate the G-E capacitor with desired characteristics. For example if you need single-section tubular with capacitance of 55 mfd at 450 V, refer to QT TUBULAR ELECTROLYTICS, Single-Section. Look for the capacitance range in which 55 mfd falls (QT1-17: 40-**60** mfd; QT1-18: 50-**60** mfd; QT1-19: 50-**60** mfd). The rating in bold-face type (60 mfd in the above rating) is the absolute or maximum rating. Check voltage required. Since QT1-19 is the only one rated for 450V, it is the correct replacement.

If rating needed were 55 mfd at 250 volts you could correctly use either QT1-18 (up to 350V) or QT1-19 (up to 450V), since G-E capacitors will work properly at any voltage up to their maximum rating. You would then choose between QT1-18 and QT1-19 on the basis of the size (¼" difference in length) or price and probably choose QT1-18.

TO SELECT MULTI-SECTION UNITS (either tubular or can-type,) follow this same process for each section. Here's a quick way to do it:

1. List values of original capacitor sections in ascending order of value.
2. Match values with their voltage ratings.
3. Find G-E units that most closely match capacitance values starting from the lowest value. Use next higher value if first unit value does not match exactly.
4. Be sure that G-E voltage ratings equal or exceed original voltage ratings. Proper replacement will usually fall within two or three catalog numbers of the first unit checked.

EXPLANATION OF RATINGS

Cat. No.	Capacitance, Mfd	Voltage
SINGLE-SECTION QT1-19 (Single-section tubular)	50-**60** (a 60 mfd unit that can be used at any capacitance between 50 and 60 mfd; 50, 55 or 60 mfd)	(a 450V unit that can be used for any voltage up to and including 450V: 450, 350, 250, 175, 150 or 50 volts)
MULTI-SECTION XC4-16 (Quad-section can)	8-8-50-50 **10-10-60-100** (The two 10 mfd units can be used at any capacitance between 8 and 10 mfd; the 60 mfd between 50 and 60; the 100 mfd between 50 and 100)	450-450-200-50 (the two 450V units can be used for any voltage up to and including 450V; the 200V and the 50V units can also be used for any voltage up to and including 200V and 50V respectively)

SOLID ELECTROLYTE SD AND MICRO-MINIATURE TANTALUM CAPACITORS

SOLID ELECTROLYTE SD TANTALUM CAPACITORS

GLP Electronics Series SD Solid Tantalum Capacitors provide unsurpassed performance for circuits demanding reliable components. They are the result of long research and development projects aimed at producing in production quantities, reliable solid tantalum capacitors.

All Series SD capacitors are designed with a porous tantalum or wire tantalum anode formed by electrochemical means to produce an extremely stable oxide dielectric. The anode is then coated with a solid semi-conductor type of electrolyte, thus preparing it for a conductive coating that is used for the cathode. The entire assembly is then hermetically sealed in a hot-tinned brass can with a time tested glass-to-metal seal, thus giving full protection against all adverse outside environmental conditions for long term operation over a temperature range from −80°C to +125°C, and under proper conditions can be operated to temperatures approaching 150°C.

GLP Series SD Capacitors are designed to meet or exceed the requirements of style CS 12 and CS 13 of MIL C 26655A.

MICRO-MINIATURE TANTALUM CAPACITATORS

GLP Type MM Solid Tantalum Capacitors are designed to provide the ultimate in micro-miniaturization. They are the first of their kind to be offered which are applicable to both the military and commercial fields. They feature wider temperature ranges, lower leakage characteristics, longer shelf life, and smaller physical sizes than most conventional miniature solid tantalum capacitors.

Micro-Miniature Solid Tantalum Capacitors are designed to operate from −55°C to +125°C where reliability and performance are prime factors.

TYPE CQM *(Bulletin EL-8A)*

Exacting performance of digital computers and related equipment demands components of the highest grade. Improved internal construction provides for low impedance at high frequencies, assures superior operation through the operating range at −20°C to +85°C.

Cases are of heavy guage aluminum. A leak proof seal is obtained by rolling the top of the case into a pliable synthetic rubber gasket. Terminals are available in two styles: tapped terminal inserts, for bus bar connections and solder lug terminals for permanent connections. The capacitors are furnished with bare case, one piece vinyl sleeve, or clear rigid plastic sleeve.

TYPE TAK, TAK-H (MIL TYPES CL64 & CL65)
MINIATURE SINTERED ANODE TANTALUMS *(Bulletin ET-8)*

Afford maximum space economy. Conventional cylindrical cases allow for various methods of mounting. Sealing method and materials used in manufacturing this capacitor assure protection against seepage and defect due to vibration. Manufactured to meet MIL-C-3965 specification, style CL-64 and CL-65 (insulated sleeve). For full details write for Engr. Bulletin ET-8.

- The tiny size and excellent stability of the Hi-VolTan® suggest its use in applications where size, weight, stability and reliability are prime factors.
- The unique construction with no electrolyte eliminates the major causes for instability and high dissipation factor.
- The leakage currents experienced are so low as to defy measurement. Accordingly the leakage current is expressed as insulation resistance.
- Voltage ratings up to 125 volts are available.
- Completely distortion free coupling can be accomplished into the megacycle range with Hi-VolTan®.

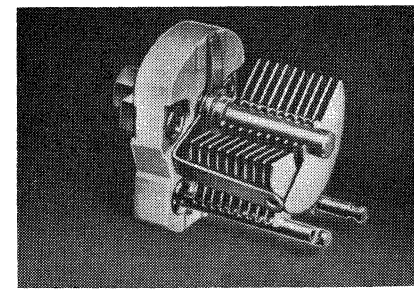
HAMMARLUND

STANDARD VARIABLE CAPACITORS

"APC" CAPACITORS



FEATURES—The "APC" trimmer capacitor originated by Hammarlund over twenty years ago is still widely recognized as the standard capacitor of its type. Its use is indicated in all classes of equipment where a compact, high quality air dielectric trimmer is required. It was designed to resist effects of temperature, moisture and vibration. Silicone treated steatite insulation is used to insure high leakage resistance.

CONSTRUCTION—Brass rotor and stator plates are soldered to brass supports. Nickel-plated phosphor bronze wiper assures positive rotor contact. All metal parts are nickel-plated. Terminals are hot-tin dipped. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding the rotor.

SPECIFICATIONS—Straight line capacity characteristic. Available either with hexagonal collar on slotted shaft to permit rotor adjustments to be made with wrench or screwdriver or with ½" extended shaft for knob control or shaft coupling. (Type "B") "APC-C" Lock Type now also available through distributors. Air Gap is 0.015" nominal. Tested at 600 V. R.M.S., 60 cycles.

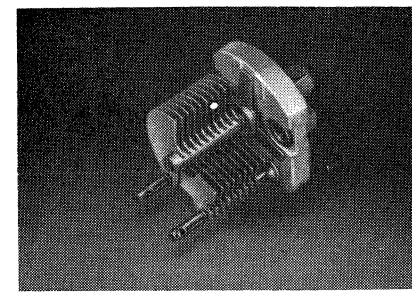
"MAPC" CAPACITORS



FEATURES—The "MAPC" capacitor is representative of Hammarlund's efforts to meet the demand for smaller dependable components. It is a scaled-down version of the popular "APC" with everything reduced except the quality and performance characteristics. For example, an "MAPC" is about half the size and weight of an "APC". Lower minimum capacities and low inductance make the "MAPC" suitable for VHF use.

CONSTRUCTION—The standard "APC" construction is used in this capacitor. Rotors and stators are fabricated by soldering brass plates to supporting members and nickel-plating the assemblies. Nickel-plated phosphor bronze wiper assures positive rotor contact. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding rotor.

SPECIFICATIONS—Straight line capacity. Available either with screwdriver or socket wrench adjustment or with 7/16" extended shaft for knob control or shaft coupling. (Type "B") "MAPC-C" Lock Type now also available through distributors. Air Gap is 0.0135" nominal. Tested at 600 V. R.M.S., 60 cycles.

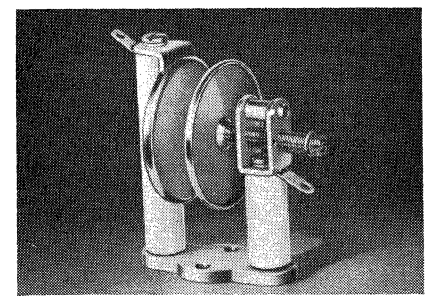
NZ-10" CAPACITORS

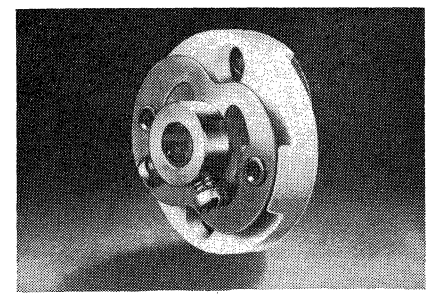


EATURES—The "NZ-10" is a compact transmitter neutralizing capacitor designed for easy nd accurate adjustment. The rotor is attached to a fine-thread lead screw which may be djusted with smooth and precise action by a screwdriver and locked securely by a readily ccessible clamping screw. A stop prevents shorting of plates at maximum capacity. Long akage paths to ground from both rotor and stator are provided. Glazed steatite insulators nd smoothly rounded aluminum plates minimize flashover.

SPECIFICATIONS—Capacity is adjustable from 2.3 to 10 mmf. Peak voltage rating is 3000 V. at maximum capacity (minimum gap) position.

Net Price $4.77

FC" and "FNC" COUPLINGS



EATURES—The "FC-46-S" is an insulated flexible coupling designed to provide for mechanical ganging of shafts even though angularly misaligned. The smallest dimensions have been incorporated consistent with the rugged construction necessary for general service. A high degree of electrical isolation is achieved through the use of silicone treated steatite insulation. Flashover voltage is approximately 5000 V. R.M.S. Brass hubs and spring copper phosphor bronze flexible arms are nickel plated. An exclusive and important feature of this coupling is its characteristic of uniform side-thrust through 360° of rotation. This eliminates tendency to vibrate at high speeds, minimizes bearing wear and assures accurate locking.

The "FNC-46-S" is a non-insulated coupling for use where electrical continuity between shafts is required. The flexible arms are soldered securely to a nickel plated brass ring instead of an insulator.

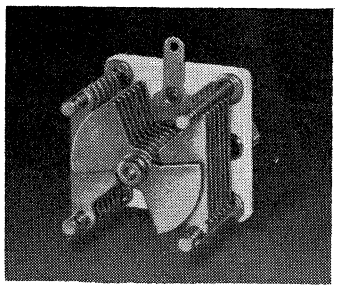
"RMC" CAPACITORS

FEATURES—The "RMC" was designed specifically for applications requiring an "MC" type tuning capacitor with very rigid construction. Its sturdy frame consists of heavy gauge aluminum end panels held together by three aluminum tie rods. It has a brass sleeve front bearing and a single ball thrust rear bearing for smooth tuning and a high degree of resetability. The rotor contact is a forked silver plated phosphor bronze spring wiping against a wide disc on the rotor. The plate shape and other constructional features are the same as on the "MC". Tapped holes in front panel and in mounting feet, as well as additional brackets for inverted mounting permit a wide variety of assembly methods. "M" type plates and ball-bearing construction can also be made available as specials.



"BFC" CAPACITORS

FEATURES – The "BFC" "butterfly" type capacitor has very low minimum capacity, low in inductance and isolated rotor for use in VHF applications as a series capacitor with no rotor connection. For dual split-stator capacitor use, it has a low-loss positive rotor contact. Mechanical and electrical symmetry and stator terminal locations minimize circuit inductance.

CONSTRUCTION – Brass rotors and stators are soldered and nickel-plated. The contact wiper is heavily silver plated phosphor bronze. Tapped studs on the silicone treated steatite front panel permit mounting the capacitor without grounding the rotor. The sleeve type bearing is nickel-plated brass.

SPECIFICATIONS—Straight line capacity. 90° rotation from minimum to maximum capacity position. Air gap is 0.030" nominal. Tested at 1200 V. R.M.S., 60 cycles between rotor and each stator.

"VU" CAPACITORS

FEATURES – The "VU" is a uniquely designed UHF tuning capacitor using completely original concepts. With it, conventional "lumped constant" circuits, rather than tuned cavity techniques, can be efficiently used up to 500 megacycles. In addition to employing the capacitor sections in series to eliminate the rotor wiper, the design also utilizes Pyrex balls to form precision bearings and to completely isolate the rotor. Thus, noise generated by rubbing metal-to-metal contacts and variable resistance paths in the bearings have been totally eliminated. Circuit connections are made to threaded studs on each stator. This permits vacuum tube and inductor to be mounted adjacent to and on opposite sides of the capacitor to minimize circuit inductance. The symmetrical design is ideal for tuned circuits operating up to 500 megacycles.

CONSTRUCTION—Rotors and stators are of brass with plates soldered in precisely located grooves and then silver plated to increase the "Q" of the capacitor. The insulation is silicone treated steatite. A lengthwise frame members are of brass to minimize temperature effects. Base mounting brackets are provided.

SPECIFICATIONS—The capacity characteristic approaches a straight line frequency curve as indicated by nominal values in table at left. Air gap is .016" nominal. Tested at 700 V. R.M.S., 60 cycles, between rotor and each stator.

"MAC" and "MACBF" CAPACITORS

FEATURES—The "MAC" provides the low minimum capacity essential for use as a trimmer in the VHF range. It was engineered and designed to produce a rugged, stable, highly reliable miniature component for today's equipment.

CONSTRUCTION – Its silicone treated steatite base is only ¾" x ⅝". Rotor and stator are soldered assemblies and are of brass, nickel-plated. Rotor and stator terminals are positioned to permit short leads. The threaded bearing is provided with flat sides to permit single hole mounting.

SPECIFICATIONS—Straight line capacity. Screwdriver adjustment. Air gap is 0.017" nominal and tested at 880 V. R.M.S., 60 cycles, except the MAC-30 which has an air gap of 0.0135" nominal and tested at 600 V. R.M.S., 60 cycles. "MACBF" is butterfly version of the "MAC." It is designed for dual split-stator capacitor use.

STANDARD VARIABLE CAPACITORS

"MC", "MCA" and "MCD" CAPACITORS

FEATURES—The "MC" is a versatile single section tuning capacitor designed to give the equipment engineer a choice of mountings, connections and capacity characteristics. The threaded brass front bearing and tapped aluminum end brackets permit panel or base mounting. "MC-S" capacitors have a straight line capacity characteristic. "MC-M" units have offset plates resulting in a "Midline" characteristic which more equally spaces frequencies. "MC-X" units are wide-spaced for high voltages. Hammarlund "MC" capacitors, except for "MCA" types, have silver plated phosphor bronze wiping contact, silicone-treated steatite insulation, soldered nickel-plated brass rotors and stators, rotor shaft supported on bearings at both front and rear of capacitor.

The "MCD" is a split-stator panel-mounted capacitor with all the "MC" features. Stators have terminals on both sides. Stators on single-spaced capacitors are separated by a shield. Wide-spaced units have no shield. Multi-section capacitors can be designed for special applications.

A rotor stop is available on "MC" capacitors on special order.

SPECIFICATIONS—Straight line or "Midline" capacity characteristic. Single-spaced types have 0.0245" nominal air gap and are tested at 1000 V. R.M.S., 60 cycles. Wide-spaced ("X") types have 0.0715" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles.

"HF" and "HFD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HF" is a single section tuning capacitor employing "APC" rotor and stator design. Extra long sleeve bearing and positive contact nickel-plated phosphor bronze wiper make this unit ideally suited to high frequency applications. Silicone treated steatite insulation. Single hole or base mounting. Special spacing, capacity values, finishes and other modifications are available to manufacturers on special order.

DOUBLE SECTION CAPACITOR — The "HFD" dual capacitors, like the "HF" singles, incorporate advanced features providing for maximum efficiency at high frequency. Soldered brass plates are nickel-plated. Aluminum front and rear end panels are mounted on a heavy silicone treated steatite base. Front and rear bearings with wide individual silver plated phosphor bronze wipers for each section assure long life and maximum contact efficiency. Single hole panel mount or base mounting. Electrostatic shield between sections. Terminals are provided on both sides of each stator to permit mounting tube and inductor on opposite sides. Multi-section capacitors can also be made available to customer specifications.

SPECIFICATIONS—Straight line capacity. Single spaced types (HF and HFD) have 0.015" air gap and are tested at 600 V. R.M.S., 60 cycles. Wide spaced types (HF-X and HFD-X) have 0.045" air gap and are tested at 1400 V. R.M.S., 60 cycles.

"HFA", "HFA DIFFERENTIAL", "HFA DUAL", and "HFBD" CAPACITORS

SINGLE SECTION CAPCITORS—The "HFA" is a single section tuning capacitor similar to the "HF" except that larger plates permit wider air-gaps for the same capacitance values. Resultant higher breakdown ratings extend the use of the capacitor into the high frequency low-power transmitter field. A threaded sleeve bearing permits single hole mounting and the bracket supplied may be used for base mounting. A lug type terminal mounted with the bearing provides an efficient rotor connection.

DIFFERENTIAL TYPE CAPACITORS — The "HFA" type units are now available as standard items in the differential type construction. The unit is mounted with an ungrounded rotor making it suitable for a wide field of application. In addition to the features of the "HFA" the design also incorporates the use of a spring bronze silver plated wiping contact on the rotor.

DOUBLE SECTION CAPACITORS—The "HFAD" and the "HFBD" are dual balanced rotor capacitors employing front and rear panels plus a single ball bear thrust. Both units are applicable to transmitter design. The construction features are similar to the "HFA" and the "HFA Differential" type capacitors. Additional special feature employed on the "HFBD" type incorporates the use of an insulated shaft extension on the rotor to safeguard against shock hazards with the application of high voltages.

SPECIFICATIONS—Straight line capacity. Air gaps and test voltages are as indicated in table. However, "HFBD" breakdown voltages are doubled and capacitance values approximately halved when stator sections are connected in series.

Hammarlund's more than 50 years experience in the development and manufacture of capacitors has resulted in an endless knowledge of techniques. Such "know-how" includes the making of special capacitors using standard techniques and/or components, or giving birth to a completely new custom product—from concept through to production.
An example of this extended knowledge is the fact that Hammarlund has manufactured over 1000 different types of APC capacitors.

These capacitors came into being as a result of the many modifications required by our customers for their specific applications. Any standard capacitor listed in this catalog can be modified to customer requirements. Such variations include end-panels, shaft diameter and lengths, bearings, special materials and finishes, special air gaps on most units, etc.
Custom made precision units to suit all electrcial and environmental specifications can be fabricated on special order. The combinations are endless.

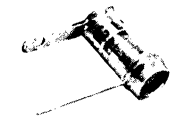
RELY ON JFD THE TRIMMER PISTON CAPACITORS AMERICA KNOWS BEST!

The most reliable in the industry . . .
. . . the most advanced design . . .
. . . the largest selection (over 300 models) . . .



the finest research and development facilities . . . a sales and service organization that spans the globe—are a few of the factors why JFD is **first** in trimmer piston capacitors. Shown here is a short-form representation of the trimmers now available from JFD for prompt delivery. JFD 'N' series utilize Hi-Life mechanisms, greatly increasing adjustment life. 'N' series (except for quartz units) also use 0483 green glass which affords much higher Q and 25% greater capacitance. 'Y' series also use Hi-Life adjustment mechanism. For complete listings write for JFD Trimmer Catalog No. C-64.

JFD also manufactures LC tuners, metallized inductors, ceramic fixed capacitors, and delay lines fully described in individual catalogs and bulletins.

① Current ratings can usually be increased by 50% with proper forced air cooling, and up to 400% with water cooling.
② Nominal dimensions are for the largest unit of each type.
③ Voltage and current limitations are dependent upon capacity and frequency. Specific voltage and current information at all frequencies is available upon request.
NOTE: A series of adjustable capacitors is available to cover the range of 8 to 1000 pf at 10 kv.

Jennings application engineers are available to discuss special application problems. If necessary we will run special tests in the Jennings Radio Frequency Testing Laboratory, where equipment is available with frequencies up to 600 mc, and power ratings up to 100 kw.

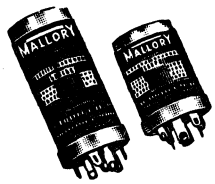
MALLORY CAPACITORS



FP-WP AND PFP-PWP METAL CAN ELECTROLYTIC CAPACITORS

FP-WP capacitors are manufactured to the most rigid quality standards. They are designed for extremely long-life service at 85° C. All are designed with "etched cathodes" for hum-free operation and feature exclusive vent and seal construction. FP-WP types have standard twist-prongs, PFP-PWP fit exactly into EIA standard printed circuit boards. FPS is special mounting used in Delco auto radios.

"A" suffix indicates new reduced can size. All PFP-PWP types may be used in standard twist-prong mounting while FP-WP types may be quickly adapted to printed circuit mounting by using the FPA Adapter Kit (Net Each, **27c**). All cases are at negative potential. See complete capacitor hardware listing on another page. ***SIZES are shown at end of listing.**

INDUSTRIAL ELECTROLYTICS

Heavy duty industrial aluminum electrolytics which also meet detail specifications of MIL-C-62. PB series plugs into standard octal tube socket. BS series are bathtub style hermetically sealed in hot-tinned steel case with two solder lugs and mounting flanges. Standard EIA tolerances apply to BS series and operating temperature is −55° C to +65° C. RS, HS, and RM series are metal cased with threaded necks and insulated stranded wires.

MALLORY TANTALUM CAPACITORS

TANTALUM FOIL CAPACITORS (MIL-C-3965)

Mallory tantalum foil capacitors are furnished in two temperature ranges (+85° C and +125° C) and in two types of construction (plain foil or etched foil). Both temperature ranges and both types of construction are available in either polarized or non-polarized ratings.

All Model Numbers and Prices listed are for bare metal cases. For Mylar* insulating sleeve, add one number to MIL type (i.e., CL34+1=CL35, etc.) or change 12th digit in Mallory number from **"0"** to **"1"** (i.e., TAF505M006N1A). Add **10c** to all prices shown.

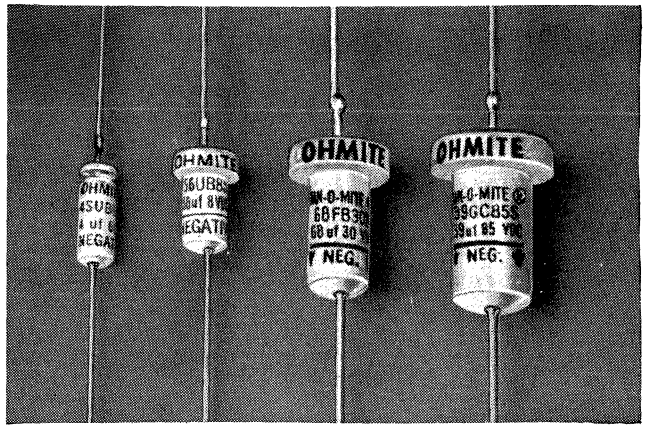
TANTALUM SLUG CAPACITORS — TAN-O-MITE® SERIES TS



1½" Leads Com'l Size SU, MIL Size T1 | 1½" Leads Com'l Size U, MIL Size T1 | 2¼" Leads Com'l Size F, MIL Size T2 | 2¼" Leads Com'l Size G, MIL Size T3

The "slug" type of tantalum capacitor utilizes a porous anode of sintered tantalum. Intended for polar applications, these capacitors offer the best characteristics of all the types described in this catalog. They exceed the vibration test of MIL-C-3965C, Grade 3.

Available from stock in two physical types—the "hat-shaped" type, 4 sizes (Y, U, F, G) and the "straight-cylindrical" type, 3 sizes (SU, SF, SG) which have the same range of capacitance and voltage as the equivalent hat-shape sizes. Hat-shape types are offered in two operating temperature ranges, −55°C to +85°C and −55°C to +125°C; the straight-cylindrical type is offered only in the 85°C range. Tolerances: See footnotes under price and stock tables. Units insulated with plastic sleeve are available at slight extra cost.

Smallest subminiature electrolytic capacitors available. The anode is specially processed tantalum wire sealed into a silver case. Axial leads are 2" long. Units are insulated with Mylar plastic sleeve. These polar type units are used in DC circuits where capacitance can exceed nominal circuit values (standard tolerance, —0 + 100%). Wide use in hearing aids and other subminiature apparatus. Operating temperature range: —55°C to +85°C. Nine of thirteen available case sizes stocked.

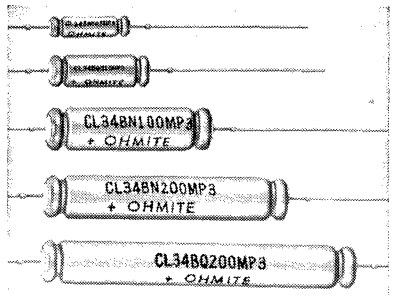
TAN-O-MITE® SERIES TF TANTALUM FOIL CAPACITORS



Plain and etched tantalum foil units stocked in polar and non-polar types. The polar unit is intended for applications in which reversals of potential do not occur but will withstand reversals up to 3.75 VDC except where the voltage rating is less. Foil types offer closer tolerance, also leakage and power factor characteristics superior to wire types. The etched foil units afford higher maximum capacitances for a given case size and have somewhat lower leakage current than the plain foil units. Operating temperature range: −55°C to +85°C. Tolerances: Plain foil, ±20% (MIL code "M"). Etched foil, less than 50 volts, −15 +75% (MIL code U); 50-99 volts, −15 +50% (T); 100-150 volts, −15 +30% (S). 1½" axial leads. Designed to meet MIL-C-3965C, Styles CL24, CL25, CL26, CL27, CL34, CL35, CL36, CL37. 5 MIL case sizes. All units meet MIL vibration rating Grade 3. Units can be furnished with plastic sleeve.

Dual Section Electrolytics — Type "IL"

Hermetically sealed in aluminum tubes with completely flexible leads. U/L Approved, plastic coated leads are rivetted directly to the condenser end disc, eliminating the use of rigid terminal risers, allowing capacitor to fit into smaller space and eliminating lead breakage. IL capacitors have wrap around mounting strap and are common negative, guaranteed for one year.

HIGH VOLTAGE CAPACITORS
TYPE LK

MYLAR★ PAPER FILTER CAPACITORS

TYPE LK Capacitors are specifically designed for filter, bypass and coupling applications in the low audio frequency range. The CP70 style container and internal construction permit operation in any position. Glazed steatite bushings are used, and in the voltage ranges of 2000 and greater, steatite is the electrical insulation in the terminal assembly. The threaded stud terminal is supplied with nut, lockwasher and/or solder lug. The whole assembly is hermetically sealed.

ELECTRONIC COMPONENTS

Type 500 Computer Electrolytic

FOR HIGH RIPPLE AND HIGH TEMPERATURE APPLICATIONS

The Sangamo Type 500 capacitor represents the optimum design in electrolytic capacitors for storage and filter requirements in high reliability circuits requiring 85°C operation. An exceptional anode surface gain and better production control have been achieved in perfecting the Type 500. These advanced techniques, plus the use of the best electrolytes, result in capacitors having lower ESR which may be operated at higher ripple currents and in case sizes smaller than conventional capacitors. All units are supplied with screw terminals. Mounting brackets are furnished at extra cost. ***For more complete information write for Bulletin 2236.***

SANGAMO ELECTRONIC COMPONENTS

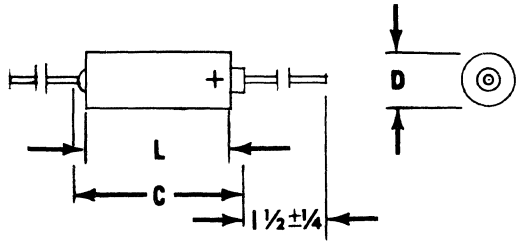
Type CS12 and CS13 SOLID TANTALUM CAPACITORS



The Sangamo Types CS12 and CS13 are soli electrolyte tantalum capacitors designed fo filter, by-pass, coupling, blocking and other lo voltage d-c applications found in telemeterin devices, airborne systems, computers and mis siles. They provide highest capacitance pe cubic inch in an extremely small hermeticall sealed container. All units are suitable fo operation at full rated voltages over the temp erature range of -80°C to +85°C and whe properly derated will operate up to +125°C pe MIL-C-26655 specification.

DIPPED SILVER MICA CAPACITORS

Sangamo Type D dipped Mica capacitors are available in five case sizes: D15, D19, D20, D30 and D42. With the exception of the Type D20 they correspond to the MIL-C-5B sizes CM05, CM06, CM07 and CM08 respectively. These units utilize silvered mica sections encased in several coatings of electrical grade phenolic and epoxy resins. All commercial units meet or exceed the applicable requirements of MIL-C-5 and are normally furnished to a capacitive tolerance of ±5% and characteristic F. ***FOR MORE COMPLETE INFORMATION WRITE FOR BULLETIN 2323.***

SANGAMO ELECTRONIC COMPONENTS

Type S Subminiature Hermetically Sealed Metal Tubular Capacitors

Sangamo Type S capacitors are designed to meet the demands for a high quality, hermetically sealed paper tubular capacitor. They are encapsulated in brass tubular cases finished with a high tin content alloy. Hermetic sealing is accomplished by using glass-to-metal solder seal terminals. The impregnant used in these units is Etherm, an oil of high thermal stability and superior electrical characteristics over the temperature range of -55°C to +125°C. Sangamo Type S capacitors meet the case sizes and performance requirements of military specification MIL-C-25. The limited number of popular listings below are furnished with insulated sections. They are also available with grounded case if equipment requirements so dictate. The adjacent cross reference table will assist in the interpretation of Sangamo catalog nomenclatures with the various military types and case constructions.

For more complete information on other ratings, tolerances and voltages, write for Bulletin 2421.

Type HVC HIGH VOLTAGE PAPER CAPACITORS

Sangamo Type HVC High Voltage capacitors are impregnated with a halogenated hydrocarbon called Diaclor B. This oil provides the desirable electrical performance characteristics for the most severe applications. They are sealed in shock and vibration resistant drawn rectangular or cold-rolled steel cases. The absence of solder seams eliminates oil leakage and contamination from solder flux. A wide variety of capacitance ranges are available in voltage ratings up to 50,000 volts d-c. Spade, footed or wrap-around brackets are optional at extra cost, but will not be furnished unless requested. When choice of brackets is not indicated, spade type will be supplied.

SPRAGUE CAPACITORS

TYPE 180D SOLID ELECTROLYTE TANTALEX® FEED-THRU CAPACITORS

- Effectively bypasses r-f interference on low voltage d-c power circuits
- First of its kind available to designers. Positive mounting is assured with Sprague's new design.
- Large values of capacitance available in small physical size. Will carry 5 amperes d-c at 25C, 2 amperes d-c at 125C.
- Hermetically sealed in corrosion-resistant cases. Glass-to-metal solder seal terminals for maximum protection.
- Performance characteristics similar to Sprague Type 150D solid electrolyte Tantalex capacitors.
- Case measures .312 in. dia. x .689 in. long. Leads measure 1 ½ inches.

SPRAGUE CAPACITORS

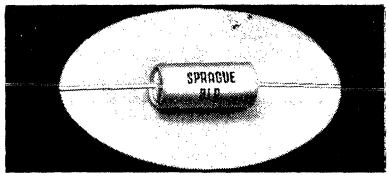
VITAMIN Q® SUBMINIATURE PAPER CAPACITORS



These capacitors are the most widely used of all paper capacitors in commercial and military electronic equipment. Hermetically sealed in metal cases, they are electrically and mechanically designed to meet stringent operating requirements.

Impregnated with Vitamin Q, a substantially linear, controlled molecular weight, hydrocarbon polymer, which is exclusive with Sprague, these dependable capacitors are available for operation in two temperature ranges: −55°C to +85°C and −55°C to +125°C. Because of their Vitamin Q impregnation, these subminiature capacitors have a higher insulation resistance and longer life than comparable units with ordinary oils.

Sprague Subminiature paper capacitors exceed the performance requirements of military specification MIL-C-25A. A limited number of the ratings shown here are listed in the military specification and should be ordered by their MIL type designation where equipment specifications so require. (See page after next.)

Listed below are the most popular insulated section (ungrounded case) capacitors. For technical data on these and other types, ratings, and tolerances, as well as on wax-impregnated units for absolute minimum size, refer to the latest issue of Engineering Bulletin 2110.

Call your Sprague Industrial Distributor for Current Quantity Prices.

CHOICE OF INSERTED TAB OR EXTENDED FOIL CONSTRUCTION

In the past, inserted tab capacitors have not been recommended for low-voltage applications (e.g., below 10 volts) but recent improvements in design now make it possible to recommend them for operation at all voltages from 1 to rated, in nearly all applications.

From the application standpoint, the principal difference between the two construction types is that, at resonance, losses are likely to be lower in the extended foil type. This is because the resistive component of impedance is likely to be higher at resonance in the inserted tab type of construction. Unless unusual circuit requirements make the losses at resonance a critical factor, the inserted tab construction is recommended, primarily because of the smaller size of the capacitor roll.

SPRAGUE CAPACITORS

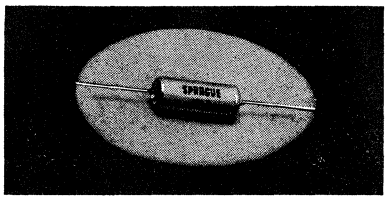
121P METALLIZED PAPER CAPACITORS

- Designed to operate at 125°C WITHOUT VOLTAGE DERATING — extremely important in military and industrial equipment where higher temperatures are encountered.
- Quality of these capacitors is surpassed only by Type 118P units described on opposite page.
- High insulation resistance — at 85°C, minimum product of insulation resistance and capacitance is 20 megohm-microfarads. At 125°C, minimum product is 1.0 megohm-microfarads.
- Hermetically sealed with glass-to-metal solder-seal terminals — capacitor cases are of corrosion resistant materials — similar in appearance to Type 118P.
- May be operated at low voltages, unlike many other metallized capacitors.
- For complete performance data, see latest issue of Engineering Bulletin 2210.
- Capacitors listed below are ungrounded case (insulated section) units without outer insulating sleeves. For information on other styles consult your Sprague Industrial Distributor.
- For quantity prices call your Sprague Industrial Distributor.



- For units with outer plastic insulating sleeve, change last digit in cat. no. from 2 to 4.

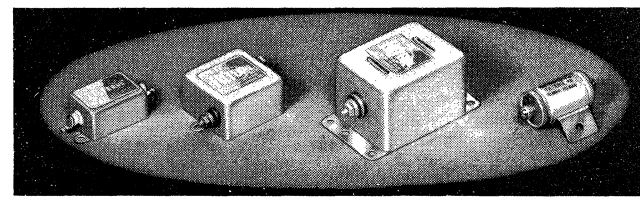
FILTEROL® FILTERS



FILTEROL 1 FILTEROL 2 FILTEROL 3 FILTEROL 4

Filterol Types 1, 2, and 3 — Designed for connection in series with power supply lines to interference-producing devices . . . A 3-terminal network with the case as one terminal . . . The selected filter should have a rating higher than the continuous operating current of the offending device . . . A single Filterol connected to the high side of the line is usually sufficient . . . In severe cases a Filterol in each leg of the power line may be necessary . . . For three or four-wire systems, a Filterol in each wire is necessary.

Filterol Type 4 — A new, exclusive Sprague development incorporating a Sprague HYPASS® Capacitor . . . Provides exceptionally high attenuation at frequencies above 5 megacycles . . . Intended for small devices with continuous current ratings up to 20 amperes.

CRAMOLIN fluid is a combination protection and cleaning preparation. It is preferably applied on contacts already in use, or on apparatus where contact deficiency has occurred and where these contacts should be protected against oxidation. May be used on old and new contacts, and with other CRAMOLIN products.

CRAMOLIN-SPECIAL fluid is not a cleaning preparation, however, it does provide the essential protection needed. It is mainly used in the manufacture of new instruments or apparatus where the improvement of performance is desired as well as to preserve and increase the life of the apparatus. Should be used on new contacts or those contacts that have been previously cleaned with CRAMOLIN.

CRAMOLIN-PASTE is a semi-solid form and is also a combination protection and cleaning preparation. Usually used for high amperage and/or high voltage use. Can be used after applications of CRAMOLIN for good results.

Ask or write for Bulletin C-200 for complete Technical Data.

CAEON SOLVENT #27

Repackaged Freon® TF Solvent
(Trichlorotrifluorethane)

A cleaning agent for removal of oil, grease, and dirt from objects without harm to metal, plastic, or elastomeric parts.

- NON-FLAMMABLE
- VIRTUALLY NON-TOXIC
- CHEMICALLY AND PHYSICALLY PURE
- CHEMICALLY AND THERMALLY INERT
- STABLE

The solvent exhibits a washing and penetrating action which aids its cleaning ability. High density and low surface tension enables Caeon #27 to wet the surface of most materials and wash away dirt and sludge.

The solvent is useful in ultrasonic and vapor degreasing equipment. Soils which are normally insoluable in any solvent can often be removed by this solvent with cavitation in ultrasonic units. Vapor rinsing is more easily accomplished without exposing object to high temperatures.

The solvent is compatible with most organic systems. It will remove soils or contaminants and leave the surface 'Residue-Free'. All standard methods of using a solvent may be employed.

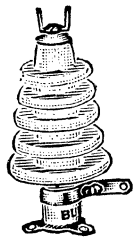
Chokes and Hardware

TRANSMITTING CHOKES



CERAMIC-COATED TYPE

Consists of five graduated pies continuously wound. Pies are not resonant on an amateur band. Distributed capacity kept at a minimum. Each choke is wound on 9/16" diameter steatite rod, has connection lugs and a mounting foot.
All chokes have a heavy ceramic coating which prevents moisture absorption and enables them to withstand momentary overloads without collapsing between the individual pies.

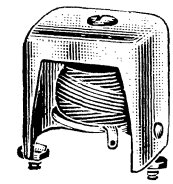
IRON CORE RF CHOKES

SILK-COVERED WIRE TYPE



Improves the efficiency of any circuit requiring an RF choke. Finely divided molded metallic core improves "Q"; results from DC resistance being 40–50% less for a given inductance than regular air-core types. DC voltage drop through the choke is considerably less, yet the choking action is equally as good. Windings are silk-covered enamel wire terminated on handy soldering lugs. Chokes mounted in small round shield can, 1 3/8" x 1 3/8" x 1 7/16".

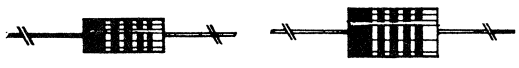
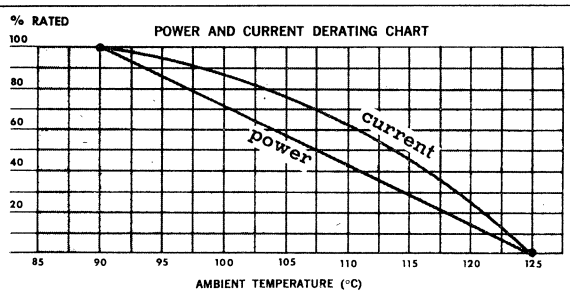
MIL-SPEC MOLDED CHOKES

MILLER MOLDED COILS CONFORM TO MIL-C-15305



This group of molded chokes affords the design engineer a wide range of inductance values, current ratings, and sizes which will fulfill most normal design requirements. Manufactured under strict Quality Control supervision and tested in accordance with MIL Standard 105 the user is guaranteed uniformity and reliability in every coil. This series conforms to MIL-C-15305, Grade and Class 7.



Tabulated currents in milliamperes are maximum values based on a temperature rise not to exceed 35° C., nor wattage dissipation in excess of listed values.

MOLDED CHOKE COILS COLOR CODING

For cylindrical choke coils. Cylindrical choke coils shall be marked with five colored bands. A silver band MIL identifier of double the width of the other four bands, located near one end of the coil, identifies military radio-frequency coils; four other bands of equal width, three indicating the inductance in microhenries and the fourth band indicating the tolerance in percent. Color coding shall be in accordance with the color code of table. When either the first or second band of the three bands is gold, this band shall represent the decimal point for inductance values less than 10, and the other two bands shall represent significant figures. For inductance values of 10 or more, the first two bands shall represent significant figures, and the third band shall represent the multiplier. For small units, dots may be used instead of bands, when specified. The diameter of the MIL-identifier dot shall be larger than the other dots. The colors used shall be in accordance with MIL-STD-174. Typical color coding for units with inductance values less than 10 and for 10 or greater is shown on figure 1.

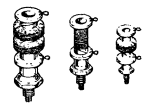
Industrial Adjustable R.F. Coils

Ceramic Adjustable R.F. Coils



The forms used in this series feature terminal rings machined from the ceramic form material. Coils wound on these forms exhibit high Q and good stability. The adjusting core is held rigidly at any setting through the use of a newly designed tension device on the bushing.

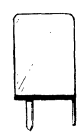
Shielded Subminiature Adjustable R.F. Coils



These compact adjustable coils offer a minimum two-to-one inductance range with relatively small changes in Q. The tuning adjustment is accessible from either the top or bottom of the coil assembly. Magnetic shielding is achieved through the use of cup cores while the metal shield offers effective electrostatic shielding. Printed circuit terminals on base and shield.

Encapsulated Adjustable R.F. Coils

This series of encapsulated coils offer the maximum possible performance from an adjustable type of inductor. The coil is wound on an epoxy form which is placed inside an epoxy cup and this area filled with epoxy resin. In this manner a complete seal against moisture is achieved and good mechanical stability is assured.

Frequency Selective R.F. Chokes

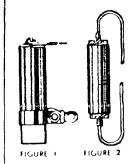

FIGURE 1 FIGURE 2

Designed for maximum efficiency and highest impedance at specific operating frequencies this group of R.F. chokes eliminates the designers task of attempting to choose the best coil for a particular application from miscellaneous and often insufficient design data. Designed to cover the major Amateur, Industrial, and Citizens bands the coils will also operate efficiently at frequencies approximating the recommended frequencies.

The RFC-3.5, RFC-7, and RFC-14 are the standoff type, mounted by a single 6-32 screw. All other coils are mounted with axial leads.

Radio Frequency Chokes

R.F. Chokes with Axial Leads

These chokes cover an inductance range from .1 microhenry to 10 millihenries in 5 decades with 8 coils per decade. Inductance values increase in steps of approximately 50%. Either single layer or 3-pi universal windings are used to insure low distributed capacity. Chokes are wound on low-loss molded phenolic or powdered iron core forms and are impregnated with a moisture- and fungus-resistant varnish. The type of powdered iron used allows the chokes to operate at all frequencies up into the ultra-high frequency region.

Dimensions: Phenolic form 1/8" diameter x 3/4" long. Iron core form 3/32" diameter x 7/8" long. Leads are 1 1/2" long.

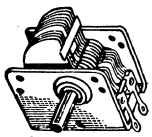
Midget Variable Condensers



Shaft dia. ¼" x 1" long. The #2110, 2-gang variable condenser antenna section has a range of 10-130 mmf. The oscillator section has a range of 10-78 mmf. The #2111, #2112 and #2113 are the standard size condensers having a range of 10-365 mmf. Mounting is provided by tapped holes in the frame of the condensers. Counter-clock rotation for capacity increase.

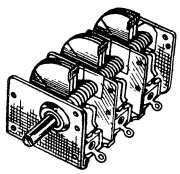
F.M. Variable Capacitor



This 3-gang 7-plate variable capacitor is rigidly constructed with widely spaced (.042 Air Gap) plates to assure highest stability. The plate contour results in an almost linear frequency versus rotation characteristics. Although the capacitor is supplied with 3 trimmer capacitors attached, it is recommended that the oscillator trimmer be replaced with a small NPO adjustable ceramic. The tuning capacitor has a 1/4" diameter shaft 15/16" long. Capacitor range is 6.6-23 mmfd. Trimmer capacitor will add to these values.

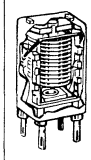
F.M. Stereo Multiplex Inductors



Basically the system involves pick-up of sound by two microphones, the left (L) and right (R). Subsequently the two audio signals are combined in such a way that L plus R frequency modulates an F-M carrier in the conventional way while L minus R amplitude modulates a 38KC stereophonic subcarrier, and the resulting double side-band AM signal (23-53KC) with suppressed carrier, likewise frequency modulates the FM carrier. A 19KC pilot sub-carrier signal also frequency modulates the FM carrier and at the receiver provides a means of controlling the frequency and phase of the 38 KC carrier for re-insertion. When broadcasting Stereo Multiplex the region of 53 to 75KC is allotted to the station for SCA signals.

In the receiver the output of the F-M detector comprises the L+R audio signal, the 19KC pilot sub-carrier, and the 23-53KC A-M modulated (L-R), suppressed carrier signal. It is then required to separate the 23-53KC signal by means of a suitable filter, generate a 38KC signal under the control of the 19KC pilot sub-carrier, re-insert the sub-carrier, and detect the resulting signal. This yields L—R. This must then be combined in a suitable matrix with the L+R signal in such a manner that the L signal appears at one output terminal and the R signal at another.

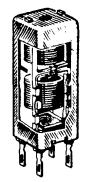
Communications I.F. Transformers



Designed for experimental use in communications equipment where selectivity and stability are important. The 100 kc. I.F. transformer and BFO coil are intended for tube application, while the 455 kc. crystal filter I.F. transformers have taps on the winding to allow for use with both tubes and transistors. The 1800 kc. I.F. transformer offers the best possible "Q" with stability to give a degree of selectivity that compares with lower frequency I.F. transformers. This transformer is for use with tubes only. Part number 1770 is a double tunel I.F. transformer having taps on both Primary and Secondary winding.

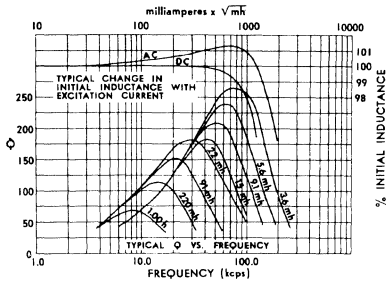
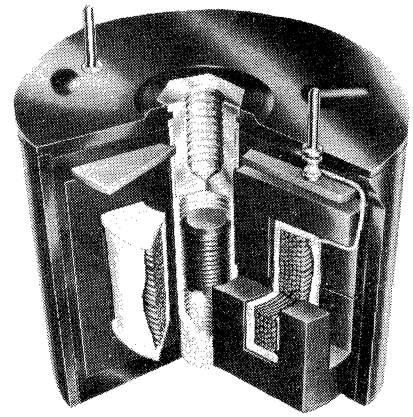
SANGAMO ELECTRONIC COMPONENTS

Type EV-263 VARIABLE INDUCTORS





Sangamo Type EV encapsulated variable inductors are guaranteed adjustable ±10% from nominal inductance value, enabling the designer to tune circuit characteristics to exact requirements. Terminals are on a 0.10" grid. The maximum operating temperature of these units is 105°C. Header pads keep unit off the mounting surface for easy flux removal and prevention of moisture accumulation. ***For more complete information write for Bulletin 2720.***

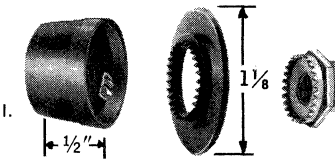
Cat. No. KRD-12
(knurled gripping surface)

Exploded view shows engineered miniature gear system, to permit precise, fine tuning of controls. As shown, 9 to 1 ratio. Other ratios designed to specifications.

Brass gears; black anodized aluminum knob and dial. Available with knurled or non-knurled outside knob.



RIGHT ANGLE RATIO DRIVES

Versatile, miniaturized, right angle rotary controls.

Featuring dual output stainless steel shafts at right angles to input, these engineered drives provide an ideal type of instrument control. Available with matched bevel or worm gears covering a wide range of ratios.

JAN'S RIGHT ANGLE DRIVES are especially useful for handling spring or gravity-loaded components since the output shaft automatically locks in any desired position yet remains free for smooth adjustment by the input shaft. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless-steel shafts mounted in oilite bearings and held under constant pressure.

JAN'S MAGNETIC SHIELDS are made of Mu-Metal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields.

In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See following pages for specifications on JAN'S BEZEL ASSEMBLIES.

SLIP-CLUTCH, SAFETY KNOBS

With Fixed or Retractable Spinners

Cat. Nos. K-1375 & K-1376 (For ¼" shafts)

Designed for driving devices such as variable capacitors, inductors, potentiometers, etc., these knobs are based upon the principle of the "slip-clutch";* automatically disengaging and slipping when a pre-determined torque has been exceeded. JAN'S SLIP-CLUTCH SAFETY KNOBS are fluted to aid in sensitive adjustments and are equipped with either a fixed or retractable spinner for fast turning. Insert-molded-to-Bakelite construction provide durable, backlash-free units to safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.

**Normally set for 2½ - 5" lbs. Can be modified for other requirements.*

Model No. K-1376 is identical with No. K-1375 but has the additional feature of a retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in either open or closed position. Model No. K-1376 is designed for use where economy of space is essential.

AIR VARIABLE CAPACITORS

Whatever the choice . . . sub-miniature capacitors for printed circuit use—or large, heavy duty types . . . time and again engineers specify Johnson Air Variables!

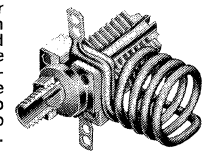
More than 11 basic capacitor types are readily available in a wide selection of single section, dual section, butterfly and differential models. Units range in size from the diminutive sub-miniature Type "U" capacitors, to large, rugged heavy duty "C" and "D" types. Standard stock capacitors in a wide range of plate spacings, capacity per section, breakdown ratings, and finishes will meet many military and commercial applications . . . specials to your specifications are also available in production quantities.

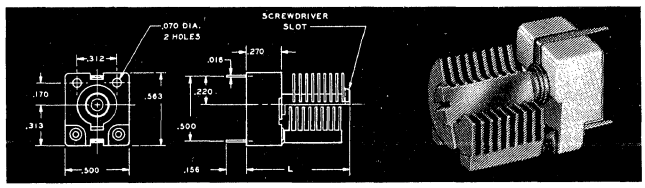
TYPE "U", "UA" AND "UB" CAPACITORS

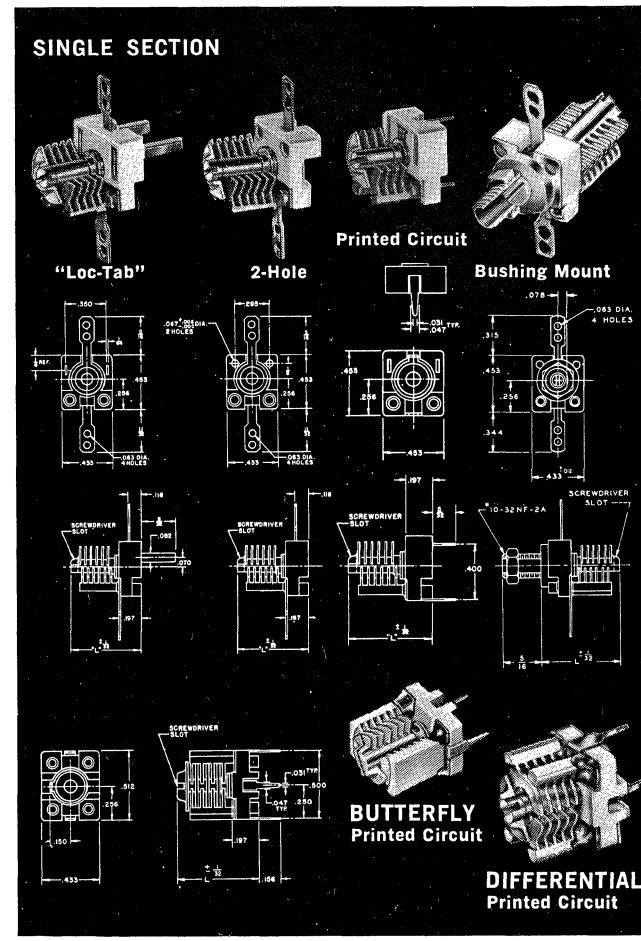
Cut costs, improve performance, and save valuable space in compact electronic equipment with these sub-miniature air variable capacitors. Available in single-section, differential and butterfly types, they occupy minimum mounting area – Type "U" requires less than 0.2 square-inch and Types "UA" and "UB" less than 0.23 square-inch area for chassis or printed board mounting. Rotors and stators are precision machined from one piece of solid brass, providing outstanding mechanical stability and uniformity. Units offer high "Q" (greater than 1500 at 1 mc.), high torque-to-mass ratio (2½ to 10 inch ounces), and exceptionally low temperature coefficient (plus 45 ± 15 PPM/°C) – provides absolute freedom from moisture entrapment found in trimmer capacitors of the enclosed or solid dielectric type. All metal parts silver-plated – ceramic is steatite, Grade L-4 or better. Exceptionally uniform delta C and voltage characteristics . . . breakdown ratings available to 1100 volts DC. No special tools required for installation – slotted and accommodates large screwdriver for quick adjustment. Choice of wide, double-pierced or printed circuit style terminals. Single-section models available in "Loc-Tab"; 2-Hole; Printed Circuit; and #10-32 Bushing Mount types—Differential and Butterfly models available in Printed Circuit types.

"U-LC" TUNERS

Combines precision machined Type "U" capacitor with an air wound, silver-plated inductor to form a compact, tuneable LC circuit. Excellent "Q" and temperature stability – capacitor end frame equipped with #10-32 threaded bushing for mounting. Recessed screwdriver slot contributes to ease of tuning – slot on opposite end of rotor shaft also may be used for adjustment. High torque (2½ to 10 inch ounces) holds rotor to adjusted position. Printed circuit types available on special order.







TYPE "V" CAPACITORS

Slightly larger than the Type "U" capacitors, these miniature air variables offer all of the design, construction and performance features of the Type "U", plus higher capacity, with very little increase in mounting area requirement. Requires less than 0.3 square inch for printed board mounting.

TYPE "M" CAPACITORS

These small Type "M" miniature air variable capacitors are excellent for use in compact equipment. Bridge type stator terminal provides an extremely low inductance path to both stator supports. Soldered plate construction, oversize bearing, and heavily anchored stator supports insure extreme rigidity. Large beryllium copper compression rotor contact provides steady torque – and rotor stays "put" where set. Rotor contact and all other metal parts are nickel plated – steatite insulator is DC-200 treated. Mounting bushing threaded with ¼-32 flats to prevent turning – mounting nut furnished. Peak voltage 1250 volts on .017" spaced units; 850 volts on 160-130 which is spaced .013". 3/16" diameter shaft* slotted for screwdriver adjustment. Available in production quantities with the following features: locking bearings; 180° stop; various shaft extensions; high torque; silver or other platings.
*Instrument type tuning knob to fit 3/16" shaft available.

TYPE "S" CAPACITORS

Midway in physical size between the Type "M" and "K" capacitors, the Type "S" is compact in design–rugged in construction. Unit is equipped with DC-200 treated steatite insulator, and nickel-plated brass plates. The "S" capacitor has a plate spacing of .013" with a peak voltage rating of 850 volts. Other spacings; single hole mounting types; straight shaft; screwdriver shaft; or locking-type screwdriver shaft available on special order in production quantities. Available in Single Section, Butterfly, Differential and Dual Section Types.

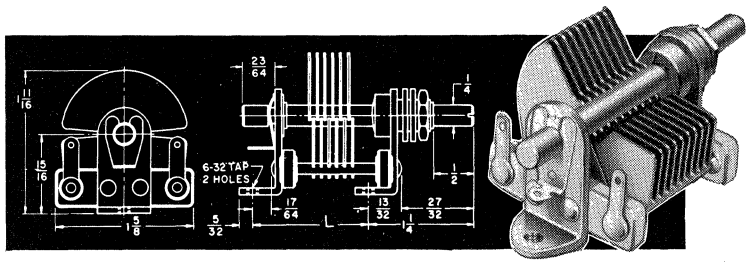
TYPE "K" CAPACITORS

Widely used for military and many commercial applications, the Type "K" capacitor has a DC-200 impregnated steatite insulator, slotted stator contacts, and extra-rigid soldered plate construction. Peak voltage rating is 1000 volts with a plate spacing of .015" – plates are nickel-plated brass. The Type "K" capacitor is available in production quantities to meet MIL-C-92A specifications – other capacities and variations for specialized military and commercial applications are also available in production quantities. Butterfly and Differential Types will soon be available.



TYPE "R" CAPACITORS

This rugged Johnson version of a popular standardized capacitor, has extra-heavy steatite stator support insulators and soldered .023" thick brass plates. All metal parts are heavily nickel-plated for resistance to corrosion. Sturdy brass end frames offer excellent rigidity. Double bearing construction and silver-plated beryllium copper wiping contacts provide smooth, reliable performance. Peak voltage rating is 1200 volts – available with .024", .036", .050", .071", or .095" plate spacings, as well as special platings and shaft lengths in production quantities. Bearing threaded ⅜"-32. Also available without mounting feet for panel mounting applications.

TUBE SOCKETS—GENERAL SPECIFICATIONS

To simplify selection of sockets and to provide complete specifications for standard, industrial and military requirements, wherever applicable, Johnson tube sockets have been categorized under a socket standardization program. General specifications are listed on the following pages — detailed specifications on the complete socket line are covered in Socket Standardization Booklet 536. Should you desire a copy for Engineering Department use, please make your request on company letterhead.

Standard — Commercial grade for general requirements. Bayonet sockets have porcelain bases, glazed top and sides with .0002 cadmium-plated phosphor bronze contacts. Wafer sockets have glazed steatite bases, DC-200 treated. Contacts are plated brass with steel springs. Shells and shields are etched aluminum.

Industrial — Higher quality than Standard types. Glazed steatite bases, DC-200 treated. Contacts: .0005 silver-plated beryllium copper on Bayonet Sockets — .0005 silver-plated phosphor bronze with beryllium copper springs on Wafer Sockets. Shells and shields are aluminum, iridite No. 14 treated. (Except 123-206-100.) Fungus resistant cushion washers under contacts.

Military — Top quality for military requirements. Glazed grade L-4 or better steatite bases, DC-200 treated. Phosphor bronze contacts and beryllium copper springs, .001 silver-plated on Wafers — Bayonet sockets have .0005 silver-plated beryllium copper contacts. Aluminum shields on shielded Wafers are iridite treated — bayonet shells are brass .0003 nickel-plated. Threaded hardware .0002 nickel-plated, unthreaded hardware .0003. Hot tin-dipped terminals. SOCKETS FOR RCA 8072, 8121 AND SIMILAR TUBES

For ultra high frequency tubes such as RCA #8072, #8121, and #8122 types. Base materials have low dielectric constants which result in low pin-to-pin and shunt capacity. Elevation pads permit excellent base pin cooling. Raised boss provides indexing – aids in aligning tube pins and socket contacts when inserting tube. Socket contacts grip tube pins directly at base of tube – providing minimum inductance. Barriers between terminals for increased leakage path and higher voltage breakdown. Means for direct cathode ground provided by tabs located at mounting points adjacent to cathode contacts. Large center hole and base configuration results in low capacity; three point mounting provides stability. Terminals numbered. Teflon chimney offers increased leakage path and higher voltage breakdown. Low inductance screen by-pass capacitor for VHF and UHF operation.

Diallyl Phthalate base and mill hardened beryllium copper contacts, silver plated, provide superior electrical characteristics. Continuous heat resistance to 400°F.

CITIZENS' BAND RADIO

THE RCA MARK VIII Type 17704

The RCA Mark VIII Radio-Phone is a 27 megacycle citizens' band 2-Way Radio designed to provide business and industry with a dependable short-range communications facility. Its low cost and uncomplicated operating features also make it ideal for use by sportsmen.

The Mark VIII may be operated for business or personal use. Although no operator's license is required, a station license is necessary and may be obtained through application to the FCC using the form supplied with the unit. This station license is granted only to citizens of the United States 18 years of age or older, but persons other than licensees, including those under 18, may operate units under the supervision of the licensee.

In many respects, the Mark VIII represents a significant departure from ordinary citizens' band radio design. Its low, slim silhouette (only 3½ inches high) facilitates installation in extremely cramped locations permitting under-the-dash mounting even in today's small cars.

One of the more unique features of the RCA MARK NINE is the combination "S" meter and relative RF output meter which provides the operator with a relative indication of the strength of the incoming signal ("S") and of the RF signal he himself is transmitting ("EO"—output voltage).

Another important new feature incorporated in the RCA MARK NINE is the Spotting switch. Use of the "spot" feature permits precise manual tuning of the receiver to any one of the transmit crystal frequencies. This feature has particular value in operations in which a number of vehicles are employed, each operating on a different frequency.

For applications where an additional speaker is required at some remote location, the RCA MARK NINE also incorporates an external speaker jack. Since use of the external speaker does not make the speaker in the unit inoperative, incoming calls can be heard at both locations.

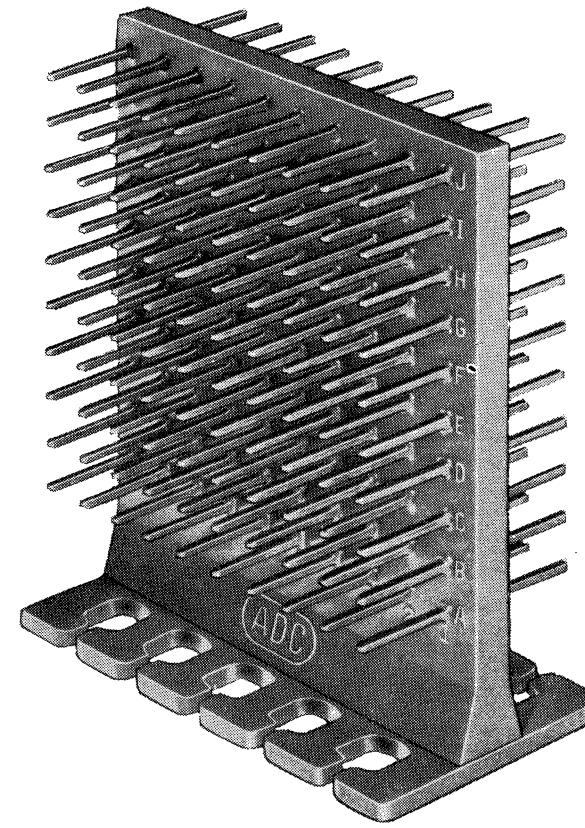
NEW "WRAPID" TERMINAL BLOCKS FOR SOLDERLESS, WRAPPED WIRE CONNECTIONS



Shown here in actual size is one of a new series of ADC terminal blocks. This model gives you a total of 100 solderless connections in a 2½ inch space.

It's only 3⅜ inches high, 2½ inches wide, and comes in one assembled piece that is mounted in seconds. Standard models available for 40, 60, 80 and 100 connections. Other configurations can be custom made in production quantities.

ONE CONNECTION EVERY FIVE SECONDS

These are solderless, wrapped wire connections. In less than 5 seconds the most inexperienced operator can spin-on a wire and make the most positive connection obtainable. He can make 100 connections in less than 8 minutes using any commercially available wrapping tool.

RUGGED, RELIABLE CONNECTIONS

Wrapped, solderless connections are mechanically stable and have less tendency to break due to handling and vibration than soldered connections. You get clean, metal-to-metal gas tight contact between wire and terminal with permanently low electrical resistance.

Both block and fanning strip are molded of durable, high-impact rubber modified acrylic plastic well known for its dimensional stability, strength and resistance to shock under adverse environmental conditions. Terminals are hard brass and plated for maximum conductivity.

Behind the development of these new terminal blocks is 25 years of experience in meeting rigid military specifications on a wide variety of devices. This is your assurance of top quality performance and long dependable service life.

Letters and numbers provide easy terminal identification.

Mounting studs are steel cadmium-chromate plated to withstand 50 hours of salt-spray.

CUT COSTS MANY WAYS

Not only do these new terminal blocks save space and time, they cut production costs.

Wrapped connections depend more on the wrapping tool — less on the operator. The result: the most positive, most uniform connections obtainable — with less need for inspection. The operator makes more connections with far less fatigue.

And, you eliminate expensive solders, connectors, damaging solder splashes, clippings, and deceptive cold-soldered joints.

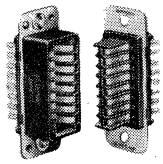
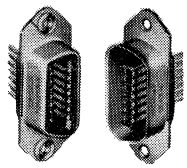
Amphenol® RACK & PANEL CONNECTORS



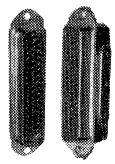
BLUE Ribbon® CONNECTORS

The Amphenol gold-plated ribbon connector provides more contact mating surface than any connector of its type. Applying the principle of the wedge, ribbon contacts exert a continuous flexing action against each other while mated, providing unusually low contact resistance. The Blue Ribbon® contact is self-wiping for reliability throughout its long life, and is available with 8 to 32 contacts. Cable to panel versions are also available.



Micro RIBBON® CONNECTORS

Amphenol's Micro Ribbon® connector is a miniature version of the Blue Ribbon. It features 14 to 50 contacts, low contact resistance, self-wiping action and miniature size.

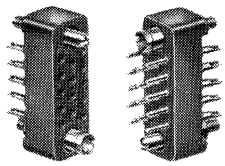


Min Rac 17 CONNECTORS

Amphenol's Min-Rac 17® connector is highly suited for saving needed space for proper ventilation, component mounting, or chassis size reduction. Mounting depth is less than most "shell-less" rack-and-panel connectors. It provides up to 50 Poke-Home® terminals in half the insert space required for standard rack-and-panel connectors. Poke-Home contacts are available in either crimp or solder versions.

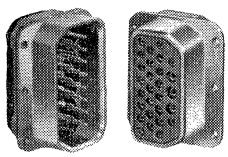
HEX-TYPE CONNECTORS

Amphenol provides a complete family of miniature rack-and-panel and cable-to-chassis connectors for interconnection in a wide range of applications. Hardware and contacts are interchangeable. Bodies are molded of diallylphthalate; gold-over-silver contacts will not tarnish or corrode and can be soldered without pre-tinning even after long storage. All hardware is nickle-plated solid brass.



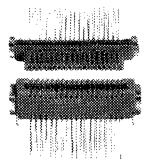
126 SERIES CONNECTORS

The 126 Series is a versatile group of connectors available in 11, 15, and 20 contacts —with or without protective can and cable clamp. Rated at 900 volts RMS, 60 CPS at sea level. Bodies are mica-filled phenolic; contacts are gold-plated.



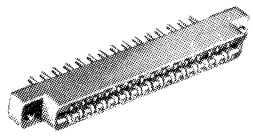
94 SERIES POKE-HOME® CONNECTORS

Amphenol's 94 Series rack-and-panel connectors feature Poke-Home contacts. Aluminum shells are cadmium plate, chromate treated. Useful for any rack-and-panel application, the 94 Series is especially valuable where circuits must be changed frequently within the connector. Poke-Home contacts can be wired and then inserted into the mounted or unmounted connectors in any desired position.



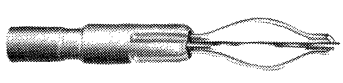
MICRO-MINIATURE CONNECTORS

Amphenol provides three additional complete series of subminiature connectors designed for modules, stick-circuitry, thin style printed circuit boards, and other micro-miniature applications. Use of the Micro-Mod®, Micro-Min® Series, and Micro-Edge® connectors is limited only by the imagination of the design engineer.



PRINTED CIRCUIT CONNECTORS

Amphenol's printed circuit connectors are available with ribbon or tuning fork contacts. The broad selection of contact tails represents the most complete line in the industry.



WIRE-FORM POKE-HOME® CONNECTORS

Unique contact design in Amphenol's Wire-Form connectors places the spring tension member in the pin contact. The Wire-Form connector combines Poke-Home contact versatility with center to center spacing as close as .075. Four complete styles are available:

Mighty-Mite®—cable-to-panel and cable-to-cable application; 7 to 61 contacts.
Tiny Tim®—module and rack-and-panel application; 5 to 33 contacts.
Micro-Rac®—rack-and-panel, cable, and module application; 52 to 104 contacts.
Wire-Form Strip—permits cutting and stacking in unlimited shapes.

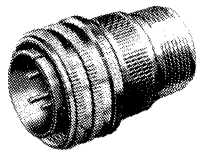
Amphenol® POWER CONNECTORS



MS CONNECTORS

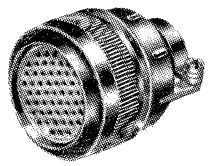
Amphenol builds MS connectors to the latest issue of MIL-C-5015 Specification. They are designed, manufactured, and approved under this specification for the armed forces, and are ideal for commercial and industrial applications which require the same versatility and dependability.

MS—E/R CONNECTORS

Amphenol's resilient dielectric MS connector meets all environmental requirements of the latest revision of MIL-C-5015. Its unitized grommet eliminates the use of bulky cable clamps, and results in a considerable reduction of length and weight in relation to standard MS connectors.

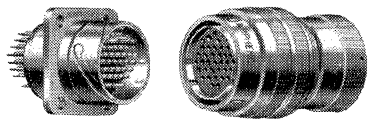
69 POKE-HOME® CONNECTORS

Amphenol Poke "R" solderless connectors provide all the lightweight environmental-resistant features of MIL-C-5015s "R" Class with two important additions: Poke-Home contacts and superior environmental performance. Incorporation of these two features make Poke "R" a highly preferred MIL-C-5015-type connector.



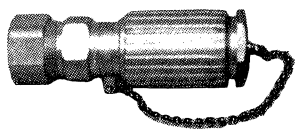
48 SERIES—MIL-C-26500 (USAF)

Meeting or exceeding all MIL-C-26500 requirements, Amphenol's 48 Series combines miniature environmentally-resistant construction and Poke-Home crimp type contacts. MIL-C-26500 connectors perform with utmost reliability in temperatures of −55° C to +260° C, with no de-rating up to 360,000 ft. Available with threaded and bayonet coupling.



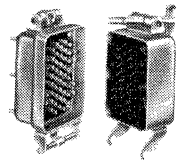
67 SERIES MINNIE® CONNECTORS

Amphenol 67 Series MinniE connectors are quick-disconnect, multi-contact, miniature bayonet types. MinniE connectors feature inclined stainless steel slots and spring loaded coupling rings. A bright orange visual indicator signals full coupling. The 67 Series has a wide variety of shell styles with environmental capability. Receptacles are available in hermetics.



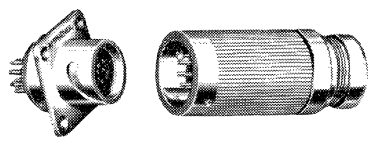
89 SERIES CONNECTORS

Rugged and completely leakproof, Amphenol 89 Series connectors provide efficient and dependable service even when entirely submerged in mud, ice, water, or mire. They are used extensively in missile ground-and-support systems, radar antenna installations, oil well and digging equipment, and other hard-service applications. Available in more than 70 insert configurations with 2 to 52 contacts.



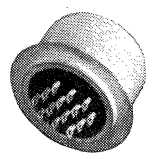
115 SERIES CONNECTORS

Amphenol 115 Series connectors accommodate 50 or 100 No. 16 contacts and are nominally rated at 750 volts RMS, 60 CPS at sea level. They provide maximum space efficiency for all applications where a large number of circuits must be broken quickly and conveniently. The vise-action of the screw lock permits a quick-make quick-break switching action of all contacts.



MINIATURE "AN" CONNECTORS

Compact, efficient Amphenol 165 Series connectors are miniature versions of standard AN/MS types. Because of their weight and space saving design they are widely used in aircraft and miniaturized electronic equipment. 165 Series connectors use bayonet couplings, and are both pressure-proof and completely waterproof—mated or apart. Hermetically sealed, 182 Series connectors mate with connectors of the 165 Series.



172 SERIES HERMETIC CONNECTORS

Amphenol 172 Series hermetic receptacles use an improved hard-glass compression seal with high visibility "Identoseal" contact identification. Both insert faces have ceramic white marking permanently fused to the dark brown glass. Receptacles mate with MIL-C-5015 MS plugs. The 172 Series is available in round flange, square flange, hex flange, and flangeless shells.

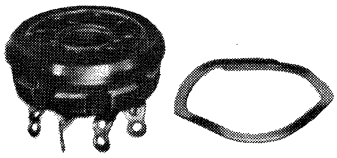
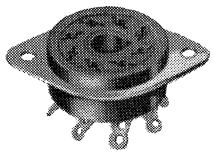
TUBE SOCKETS, AND MICROPHONE CONNECTORS



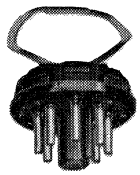
"S" TYPE TUBE SOCKETS

Amphenol "S" type tube sockets mount quickly and easily without screws or rivets by means of a patented "Retainer Ring Mounting." Sockets position to line up contacts for convenient wiring. The "S" type tube socket may be used with "Plug Caps" to make high-quality, low-cost cable connectors. Available also in mica-filled phenolic.



"MIP" SOCKETS

Amphenol's famous "MIP" socket (Molded-in-Plate) features Bakelite dielectric, and 4 to 20 contacts.

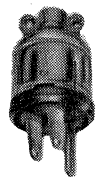


"CP" PLUGS

Amphenol "CP" plugs also mount simply through use of the patented "Retainer Ring Mounting." "CP" plugs are ideal as chassis connectors with plug-in units and are available optionally in mica-filled phenolic. They also adapt to cable applications when used with steel caps.

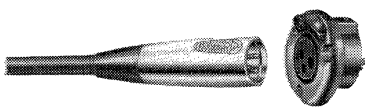
110/220 VOLT PLUGS & RECEPTACLES

Amphenol's 110/220 volt plugs and receptacles may be panel or cable mounted. Available with rubber grommeted or cable clamp type shields, recessed or raised mountings, two or three contacts.



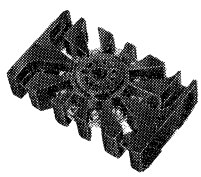
110 VOLT GROUND PLUGS & RECEPTACLES

Amphenol's 110 volt ground plugs and receptacles meet latest UL requirements. The 160 Series may be panel or cable mounted.



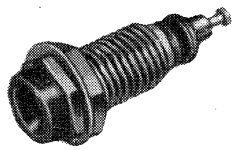
MIKE CONNECTORS

Designed for use with shielded microphone cables, Amphenol's family of microphone connectors are available in several series and include "Quik" Microphone Connectors with quick-button disconnect, 75 Series, single and double contact 80 Series, and its companion, 3 and 4 contact 91 Series.



RELAY SOCKETS

Amphenol relay sockets are available in a broad range of contact styles and sizes, with up to 20 contacts.



MILITARY TIP JACKS

Amphenol military tip jacks feature a recessed silver-plated contact for top durability and high performance. Tip jacks formerly were manufactured by the i.p.c. division.

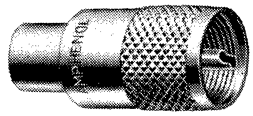
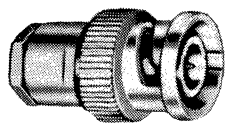
Amphenol® RF PRODUCTS



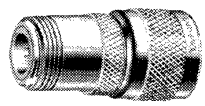
83 SERIES UHF CONNECTORS

Amphenol's UHF 83 Series consists of both small and large single and twin contact connectors. All are low-cost, general purpose connectors of non-constant impedance. They operate satisfactorily at frequencies up to 200 megacycles, can be used with caution up to 500 megacycles, and can be used at peak voltages up to 500 volts.



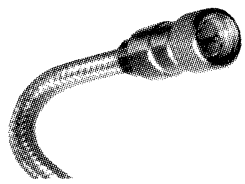
BNC SERIES CONNECTORS

Amphenol Series BNC connectors for small coaxial cables consist of non-constant impedance types and an improved constant 50 ohm impedance type. All incorporate quick-connect and disconnect bayonet-lock coupling and are weatherproof. BNC connectors are small, lightweight, and are recommended for quality, low-voltage applications, both indoors and out.



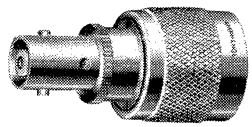
SERIES N CONNECTORS

Completely weatherproof Series N connectors are the most popular constant impedance connectors for medium size coaxial cables. They can be used throughout microwave frequencies with minimum line unbalance or increase in standing-wave ratio. Although Series N 50 ohm and 70 ohm connectors do not mate, 70 ohm cables may be used with 50 ohm Series N connectors where impedance matching is not critical.



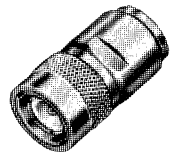
SUBMinax® RF CONNECTORS

Amphenol's SubMinax RF connector family provides the most complete subminiature line available from one source. The SubMinax 27 Series is gold-plated and uses a MIL-C-22557 screw-on and push-on coupling. The SubMinax 5116 is silver-plated and mates with competitive non-MIL-C-22557 screw-on, push-on coupling types. The 5116 contains only five components, saving as much as two-thirds assembly time.



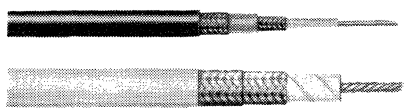
BETWEEN SERIES ADAPTERS

Amphenol can provide the most complete line available of between-series adapters.



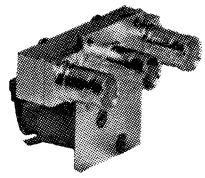
OTHER RF CONNECTORS

Types C, HN, LC, BN, TNC, LN, SKL, MB, MC, SM, TWINAX, MHV, and Terminations, as well as a variety of modifications, make up the complete Amphenol/i.p.c. line.



COAXIAL CABLE

Amphenol provides the broadest line of RG and non-RG coaxial cable available, and is generally accepted as the quality leader in this field. Dielectric includes Teflon, Polyethylene, and Polyfoam.



COAXIAL SWITCHES

Amphenol coaxial switches provide remote and manual switching up through 4000 mc. Single pole, single throw–through 12 pole. Available with a variety of terminating connectors and relay voltages.

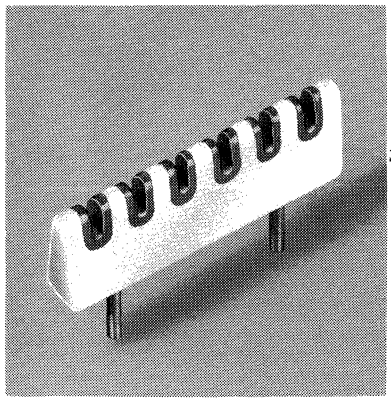
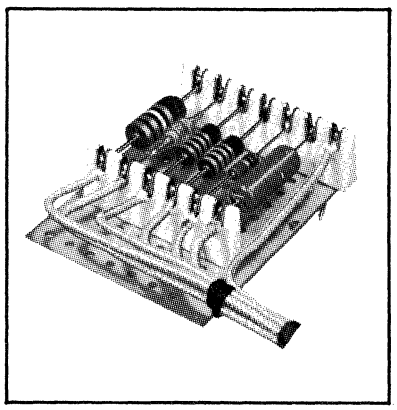
CERAMIC TERMINAL STRIPS

FOR INSTRUMENTS, COMPUTERS AND QUALITY ELECTRONIC EQUIPMENT

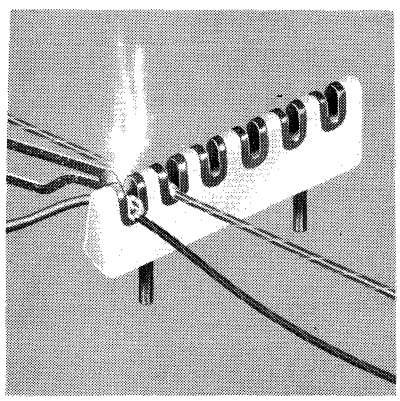


AVAILABLE

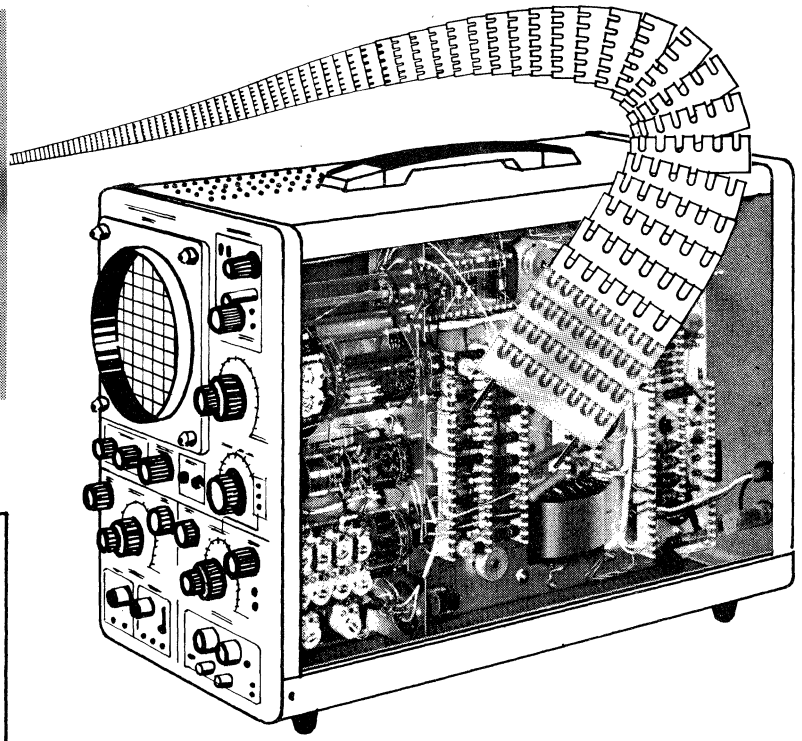
2-TERMINALS	8-TERMINALS
4-TERMINALS	10-TERMINALS
6-TERMINALS	12-TERMINALS



Designers can create functional chassis layouts.



Simplifies repairing. Resolder over and over again. Allows picking up test points very easily.



FEATURES A PERMANENT BOND BETWEEN METAL AND CERAMIC, NOT JUST AN ADHESION, BUT "FIRED" TO PREVENT METAL FROM LOOSENING.

ELECTRONIC ENGINEERS who insist on high standards in manufactured products have found these new ceramic terminal strips as an answer to their "quality" problems. They are especially suitable for experimental design where components need to be resoldered and removed. Fired copperplate on ceramic is silverplated and tinned which facilitates soldering of components and leads. They are superior to the commonly used temperature afflicted plastics. The high temperature qualifications allow these ceramic strips to withstand excessive heat. The uniform manufacturing of the terminal strips gives the row after row assembly a neater appearance and adds a quality look overall. Standard 2-56 thread studs are made extra long to be cut off at any required dimension. Ideal for long life, low resistance. Recommended for prototypes and production uses.

SUB-MINIATURE TEFLON TERMINALS

BIRNBACH

NEW SUB-MINIATURE TEFLON TERMINALS

NEW SUB-MINIATURE TEFLON* terminals provide instant mounting without any extra hardware of any kind because of the exceptional properties of Virgin Teflon*.

Low dielectric constant, low power factor (60 cps to 30,000 mc), low capacitance, high volume, high surface resistivity, high dielectric strength (1500-2000 v/mil, s.t.), continuous service —450°F to plus 500°F, unaffected by soldering, chemically inert, damage resistant, water repellant.

Installed permanently in seconds, in metallic or non-metallic chassis in one, simple, corking motion into punched or drilled holes. Mounting Hole Data: 1. Punch or drill the hole to a diameter that is .012" less than the diameter of the Teflon insulator which passes thru the chassis. 2. Where the thickness of the chassis permits, the entrance edge of the mounting hole should be countersunk 30° to the diameter of the insulator. Where chassis thickness will not permit (.040" or smaller), countersink 45° to the diameter of the insulator.

Speeds up assembly — cut production costs, no nuts, washers, staking or solding necessary especially adapted in crowded assemblies.

As for HF, VHF, UHF, microwave, radar, telemetering, guided missile instrumentation and circuitry.

Your inquiries invited for sizes not shown here. *DuPont TM

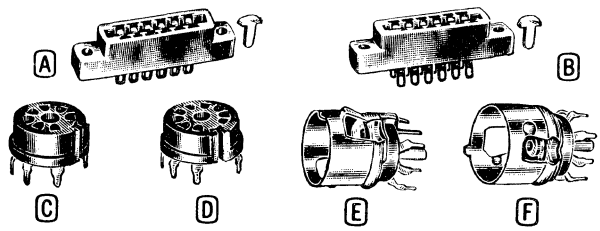
PRINTED CIRCUIT EDGE CONNECTORS AND SOCKETS



PRINTED CIRCUIT EDGE CONNECTORS

Designed for minimum printed circuit card wear, low insertion force and positive contact with the printed circuit board. Insulation is glass-filled diallyl phthalate, type SDG-F per MIL-M-14. Contacts are of phosphor bronze with .00003" minimum gold plated. Types 250, 251 and 252 utilize bifurcated contacts, permitting two flexing surfaces instead of one for positive contact. Bifurcated contacts are especially recommended for added contact reliability where vibration or printed circuit board irregularities would otherwise cause trouble. Connectors meet requirements of MIL-C-21097A (Ships) where applicable. One plastic polarizing key furnished unassembled. Rating: 830 v. AC rms.

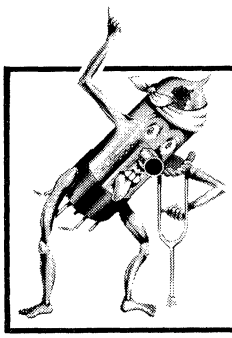
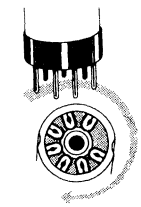
SOCKETS



TUBES OF THE WORLD UNITE! Revolt against outmoded, out-dated sockets that break our pins, damage our usefulness, relegate us to the scrap heap. Beseech your Engineers and P.A.'s to specify ELCO E-Z MATE* Sockets . . . exclusively!

ELCO'S PATENTED SOCKET FEATURE

CONFORMING TO MIL-S-12883-A, our exclusive, patented SOCKET design will be found in all our 7-Pin and 9-Pin Base-Shield and Saddle Type Sockets (except Ceramic). This ingenious design provides a positioning-key at the top of the socket which permits the tube to "find" its correct insertion position without loss of time or pin damage. And by virtue of the E-Z MATE* feature, tube locations may now be designed into "blind" or formerly inaccessible positions.



Military Sockets per MIL-S-12883-A
